LETTER OF TRANSMITTAL

Department of Public Instruction,

Tallahassee, Florida, December 1, 1928.

To His Excellency,
John W. Martin,
Governor of Florida.

Sir :

In compliance with Section 27, Article IV, of the Constitution of Florida, I have the honor to submit herewith the Biennial Report of the Department of Public Instruction for the two years beginning July 1, 1926, and ending June 30, 1928.

Yours respectfully,

W. S. CAWTHON,
State Superintendent of Public Instruction.

CHAPTER I

THE LEGISLATIVE PROGRAM

For many years it has been customary for this chapter to include some general observations relative to school matters in the State at large, and also some recommendations pertaining to school legislation.

Inasmuch as the legislature of 1927 authorized an educational survey of the State and directed the Survey Commission to report to the legislature of 1929 accompanying its report with bills pursuant to its findings and recommendations, the usual custom of the State Superintendent is not followed this year.

The reader is respectfully referred to the report of the Survey Commission.

Balance, July 1, 1928	\$ 2,976.36	

CHAPTER II

VOCATIONAL EDUCATION

The National Vocational, or Smith-Hughes, Act was passed in 1917. Since this time Florida has accepted its full share of the appropriation made available to the several states for the promotion of vocational training. Florida has matched each year the Federal appropriation, and has maintained, through its state board for vocational education, an organization for the administration and supervision of the work. These facts have made possible a greater development of educational service in this special field.

Three supervisors, one each for agricultural education, home economics education, and trade and industrial education are employed. These supervisors are under the direction of the State Superintendent of Public Instruction, who is executive secretary of the State Board for Vocational education.

The purpose of this special type of work is to train those who desire to enter vocational agricultural, home making, and industrial pursuits for advantageous entrance upon the same, and to advance those already engaged in these fields to positions of greater service and earning.

The enrollment figures following this statement bear evidence of the interest manifest in the practical training given in the courses organized under the supervision of this department.

Funds appropriated by the Federal government and allotted to the State on the basis of the Federal census are shown in the following table:

AVAILABLE FEDERAL FUNDS FOR VOCATIONAL EDUCATION
SINCE 1917

DIVISION	1917-18	1918-19	1919-20	1920-21	1921-22	
Agriculture	5,405.79	8,108.68	10,811.57	13,514.47	17,877.53	
Trade and Industries	4,000.00	4,000.00	4,144.11	5,180.14	7,926.37	
Home Economics	1,000.00	1,000.00	1,036.03	1,295.04	1,981.59	
Teacher Training	5,000.00	5,748.87	10,000.00	10,000.00	10,000.00	
Total	15,405.79	18,857.55	25,991.71	29,989.65	37,785.49	

DIVISION	1922-23	1923-24	1924-25	1925-26	1926-27	1927-28
Agriculture	20,857.12	23,836.71	29,795.88	35,755.06	35,755.06	35,755.06
Trades and Industries	9,247.44	10,568.50	13,210.62	15,892.74	15,892.74	15,892.74
Home Economics	2,311.85	2,642.12	3,302.65	3,923.18	3,923.18	3,923.18
Teacher Training	10,000.00	10,000.00	10,000.00	10,000.00	10,000.00	10,000.00
Total	42,416.41	47,047.33	56,309.15	65,570.98	65,570.98	65,570.98

The number of people enrolled by years since 1917 is given in the table below:

ENROLLMENT IN VOCATIONAL EDUCATION
SINCE 1917

Year	Enrollment
1917-18	232
1918-19	166
1919-20	1,163
1920-21	1,723
1921-22	2,613
1922-23	3,042
1923-24	4,085
1924-25	5,549
1925-26	5,096
1926-27	6,431
1927-28	6,781

GENERAL STATEMENT OF DISBURSEMENTS YEAR 1926-27

The following table gives a general summary of all disbursements made by the State Board from Federal and State Funds, with their unexpended balances in the State Treasury, June 30, 1927:

I. AGRICULTURAL EDUCATION—1926-1928

The Federal funds from the National Vocational Education Act have reached their maximum. Any increase in the amount available for the reimbursement of the salaries of teachers must come from the State. The Federal funds now available for the reimbursement of agricultural teachers' salaries are \$35,755.06. This amount is matched by State funds, making a total of \$71,510.12. The money reimbursed for the salaries of teachers of vocational agriculture will be for one-half of each teacher's salary, not to exceed a total reimbursement of \$1,500.00 per teacher. The practice departments at the University of Florida, and at the Florida A. & M. College, may be allowed a larger reimbursement. Whenever the regular all-day teacher organizes day-unit, part-time, or evening work he may be allowed a reimbursement of \$75.00 per class, not to exceed two such classes per year.

The demand for establishing new departments is increasing. Many counties have asked for several departments in addition to the ones already established. The consolidation of more rural schools should make the demand still greater.

The teachers of agriculture are employed for twelve months in the year. Besides the classroom teaching the agricultural teacher helps supervise the practice work of each pupil and helps in trying to solve the agricultural problems of the community. He is required to be a graduate from a standard agricultural college. This places the service of a well trained man in each rural community where agriculture is taught.

The training of agricultural teachers is done at the University of Florida under Dr. E. W. Garriss for whites, and at the Florida A. & M. College under Prof. L. A. Marshall for negroes. The prospective teachers are given special help in methods of teaching suitable for vocational agriculture. The observation and supervised practice teaching for the prospective teachers being trained at the University of Florida is done at the department of vocational agriculture located in the Alachua High School under the supervision of Mr. H. E. Wood, and the same training for the prospective negro teachers is carried on in the vocational agricultural department established in

the Florida A. & M. College, High School Department, under the direction of Prof. R. L. Reynolds. We feel that this is a great improvement in the teacher training departments as it gives the prospective teachers training on the job in an approved department of vocational agriculture.

The time of one state supervisor of agricultural education is devoted to the promotion, inspection and supervision of the work. This is accomplished by personal visits to each teacher, by sectional and state conferences, and by correspondence. At present there are fifty teachers of vocational agriculture. It is impossible for one man to do the office work necessary and then have time for effective supervision. The addition of an assistant state supervisor would be well worth the cost in increased service to the men in the work.

The program as now being carried out in the State is as follows:

1. Teaching all-day pupils in the high school. The boys have to be fourteen years old or over and they have to take agriculture for 90 minutes per day in addition to their home supervised practice work.

2. Day unit courses given by the agricultural teacher in some nearby elementary school. The pupils have to be fourteen years of age and the class must meet for at least one 90-minute period per week. Supervised practice work is required.

3. Part-time courses given to a group of boys who have dropped out of school; usually given to boys from 14 to 21 years of age. This work may be given at any place suitable for a meeting place for the boys. In addition to agriculture, English, arithmetic, reading and civics may be given to this group if desirable.

4. Evening courses organized for helping a group of adult farmers on some specific problems in agriculture.

5. Supervising the practice work of all pupils who are taking any organized instruction in agriculture.

The following tables give the enrollment and amount of money reimbursed to the different agricultural departments during the two-year period and a statement of the results of the supervised practice work completed:

II. TRADE AND INDUSTRIAL EDUCATION

Trade and Industrial Education is organized for the purpose of preparing young people who want to enter trade and industrial occupations to do so; to prepare those engaged in a trade to do better the jobs they are now doing in the trade; and to prepare individuals in the ranks of the trades for promotion to positions of greater responsibility and service in their chosen fields.

DEPARTMENT SERVICE—

The division of trade and industrial education has devoted itself to these objectives throughout the biennium. As a means of service to these ends, classes have been organized and conducted with the trades people in Florida.

PURPOSE AND ORGANIZATION OF TYPE CLASSES—

Evening Trade Extension classes are for the purpose of extending the trade knowledge of adult workers (16 years of age or over), and to further develop the skill of the worker in his trade.

Part-time General Continuation classes are for the purpose of enlarging the civic or vocational experience of employed boys and girls now employed in juvenile occupations. The instruction in these classes is intended to meet the actual needs of these young workers. These needs may be along social, economic, general educational, or special occupational lines.

Part-time Trade Preparatory classes are for the purpose of teaching employed boys and girls a new trade. It is assumed when training of this type is given that desire and fitness for a specific trade are known.

Part-time Trade Extension classes are organized for young employes in trade and industrial pursuits so that during the working day they may have instruction planned to supplement the job training received on the regular daily job. Industry is organized for production not instruction; therefore, both industry and the worker need this form of training so that the former may be assured of a well trained mechanic, and the latter may have the satisfaction that comes with ability to do the job, and an increased earning capacity.

Day-unit Trade classes are organized to provide special and full-time training to those who want to prepare for the trades.

PUBLIC RECOGNITION—

The public generally has continued its support of this phase of our educational work. The extent and nature of this support is shown by the expenditure of public funds equal to the State and Federal appropriation in the face of a general industrial and financial depression; by encouragement from school and industry for expansion of the program, and by the loyal and enthusiastic participation in actual training by the trades people. Industry has been awakened more than ever to its opportunities through educational service to its employees. In the larger organizations the state department has extended its service by assisting with foremanship training. By this co-operation the leaders of industry's mechanical forces have been led to a better understanding of the purposes of trade instruction. Four conferences for the training of foremen in industry were held during the biennium. In addition to actual work done, promotion has taken place in several of the larger industrial concerns of the State. This should result in a further expansion of this division's work.

STATE SUPERVISION—

One supervisor is employed in the field of Trade and Industrial Education. His duties involve co-operative effort in the promotion of trade training, the inspection of classes organized, and training of instructors in the various sections and industries of the State.

LOCAL SUPERVISION—

Seven of the larger cities have provided local supervision of vocational training. Since the larger part of the State's industry which can be served by this division is located in these centers, the maintenance of these positions enables all parties concerned to secure greater returns from this type of educational endeavor.

FINANCIAL PLAN—

The State matches equally the Federal appropriation for trade and industrial education which amounts to \$15,852.74, or a total from both State and Federal sources of \$31,705.48. This amount is in turn matched by the local school districts of the State. The State plan for vocational education under which this division operates states that per cent of the instructors' salaries for approved courses shall be paid from State vocational funds.

NEEDS—

A survey of the State shows a great need for industrial training, particularly in the following fields: building trades, power and lighting industries, railway transportation, motor transportation, automobile transportation, cigar industries, boat building and repairs, metal working trades, painting and sign service, commercial education, garment manufacture, including tailoring, printing industries, nurse's training, beauty culture, building maintenance and operation (janitorial service). In a majority of cases careful promotion has been necessary to awaken the interest of industry in training its employes. Interest comes as a result of recognized needs; therefore, the outstanding need is an educational work for the employing and working public designed to bring about this recognition. Where definite wants are stated, it is comparatively easy to establish the needed training. The improvement of instruction, and increase in local supervision are also outstanding needs in the field at this time.

DETAIL OF WORK AND EXPENDITURES OF THE DIVISION—

In summary, the work of this division of the department of vocational education for the biennium is shown in the following tabulations:

EVENING TRADE AND INDUSTRIAL SCHOOLS—1926-27

III. HOME ECONOMICS EDUCATION 1926-28

Home economics in Florida is steadily improving, new departments are being added to the public school systems each year, and more people are being reached through evening classes. Much more interest is shown in vocational home economics, and there have been many requests for the establishing of vocational home economics departments and classes in the state. Financial depression has made it difficult for the work to develop in some places as we had hoped it would, but conditions are gradually becoming more stabilized. There has been an increased interest, also, in raising the standards of home economics through better planned and equipped departments, and the employment of better trained teachers.

The State Board for Vocational Education employs a supervisor of home economics, who, in addition to supervising the schools and classes that receive State and Federal aid, promotes home economics in all of the public schools of the State. The State supervisor in her work in developing a Statewide program has met with excellent co-operation from county superintendents, school principals and home economics teachers.

Twenty additional departments were reported during the year 1926-27, making a total of 98 departments for the year. There were thirty new departments added during the year 1927-28, making a total of 128 departments in the State.

During the year 1926-27 there were 11 schools in the State receiving State and Federal aid. The enrollment in the home economics classes in these schools was 745, which was an increase of 179 over the enrollment of the past year. There were 12 schools in the State receiving State and Federal aid during 1927-28. The enrollment in home economics classes in these schools was 745.

There has been an increased interest in evening classes for homemakers. During the year 1926-27 these classes were held in seven cities of Florida with an enrollment of 729. This showed a decrease of 119 in the enrollment of the past year. During the year 1927-28 these

classes were held in six cities in the State with an enrollment of 1,171, an increase of 442 over the enrollment of the past year. The work offered in these classes in short unit courses of from 12 to 16 lessons, was that in Foods, Clothing, Dressmaking, Millinery, Applied Art, Fabric Decoration, Home Decoration and Child Care and Training. Those enrolled in these classes must be at least 16 years of age and should be homemakers. The local supervisors of trade and industrial education have been of great assistance in organizing and supervising these classes.

The teacher training work at the Florida State College for Women is given in a four-year course. The supervised practice teaching, which consists of, from 60 to 80 lessons, was done at the Leon County High School and at the Florida Demonstration School, which is run in connection with the Florida State College for Women. Each teacher did half of her teaching in one school and half in the other, thus gaining experience in the two types of schools. A new practice home, entirely equipped, was completed during the year 1927-28. The girls lived in this home during a period of nine weeks each. They assumed the entire responsibility for the management of the home, thus gaining practical experience in home management.

The teacher training work at the Florida A. and M. College is given in a two-year course. The supervised practice teaching consists of 32 lessons taught in the College Model School. Twenty-five lessons of observation are required of the students in the Methods class.

The following tabulations show a summary of the work of the Department of Vocational Home Economics for this biennium:

CHAPTER III

VOCATIONAL REHABILITATION

The Florida Legislature of 1925 passed a resolution accepting the provisions of the Federal rehabilitation act, and approving the program of co-operation on the part of the State, but no appropriation with which to put such a program into effect.

During the 1927 session, however, the Legislature provided an appropriation of \$9,000.00 annually for the following biennial to match the Federal allotment to the State of \$9,199.60 annually, and the rehabilitation service was actually begun on September 1, 1927. No related legislation was enacted or previously enforced to supplement the regular Federal-State co-operative program of rehabilitation.

The Florida State plan for vocational rehabilitation provides for one full-time supervisor who entered upon his duties September 1, 1927, and for one clerical assistant who served on half-time basis from August 1 to December 31, 1927, and on full-time basis from January 1, 1928, to June 30, 1928. The supervisor is charged with organization, administration and supervision of the State program, and is directly responsible to the State Superintendent of Public Instruction, and through him to the State Board for Vocational Education.

With a limited staff and limited funds on the one hand, and an extensive territory and scattered population to serve on the other hand, probably the chief difficulty in Florida has been to make prompt and sufficient contacts in the field alike with new cases, trainees and co-operating agencies. Without a fund for paying living maintenance, it has been another problem to provide training for cases with dependents, especially those in rural sections where training cannot be had at or near home. There have been a few exceptions where such cases have been able to move and live with relatives located in the desired training centers, or to provide in some way to take care of this item. In one instance a board of county commissioners have agreed to pay the room and board cost for case in training, and in another instance the Salvation Army has offered to de-

fray living expenses of a trainee. In quite a number of cases, county welfare boards have supplied living necessities for those taking training under the rehabilitation department.

Another disadvantage encountered in Florida is the lack of well organized and active Statewide social service. Only in the last month of the fiscal year has the State Welfare Department been organized. Just a few of the larger cities and counties have such local departments. There is a State health organization but it does not function effectively in any but the larger localities. The same thing might be said of other social service agencies.

Still another disadvantage is that Florida is not an industrial State, which condition limits employment opportunities for the disabled and makes competition keener among all classes of workers.

Finally, the collapse of the boom brought extra hardships on the disabled element as well as on the rest of the population, from which they have not yet fully recovered.

Some of these last mentioned conditions have tended to react favorably upon the rehabilitation program in that they have tended to bring to the attention of the rehabilitation department cases of dire need which, under more favorable circumstances, might have been longer delayed in coming under observation and care.

It has been quite an advantage in developing the new program that Florida was late in beginning its rehabilitation service as it has been possible to profit by the experience in the forty other states which had rehabilitation before Florida, and which have developed the service well through its experimental stages onto a sound and scientific basis. In organizing the Florida program, the early mistakes of the other states have been avoided and their best practices have been adopted as far as local conditions would permit.

It has been the desire and practice of the rehabilitation department to co-operate as far as mutual interest would allow with other departments and agencies. Other state rehabilitation departments, especially those of Georgia and Alabama, have rendered valuable service in following up Florida cases who have moved to these other states for training or residence. This service has been reciprocated at every opportunity.

The best of co-operation has been rendered within the

State by county school superintendents and their boards, by home and farm demonstration agents, welfare departments and boards, health departments, other city and county officials, civic clubs, women's clubs, schools, hospitals, employers and various other organizations, agencies and individuals. These have all been instrumental especially in reporting to the rehabilitation department disabled persons, and in many instances rendering other services necessary and supplementary to the rehabilitation program.

Through the co-operation of the orthopedic surgeon of the State Board of Health, two clinics for the examination of cripples were held during the year. The American Legion has adopted a program to continue these clinic services for the benefit of cripples found in the recent State-wide survey of cripples. This survey on the part of the American Legion, which was nearing completion at the end of the fiscal year, deserves special mention in this report because of the knowledge already obtained as to the number and needs of disabled persons in Florida. This was a project independently undertaken by the Legion as a part of its child welfare program. It had the support of the National Legion Child Welfare Committee and the co-operation, practically, of every agency in the State, including, of course, the rehabilitation department.

As a result of this Statewide survey, the names of about 2,000 cripples have been reported at headquarters to date, and in numbers without names around 3,000 have been reported. It seems these cases run about 50 per cent adults and 50 per cent children under 16 years of age.

Prior to and aside from the Legion survey, over 500 additional disabled adults have been recorded in the rehabilitation office, making in round numbers 2,000 known disabled adults, and 1,500 disabled children in the State. The results, or returns, from the Legion survey are not yet complete. Of the 500 adults reported by the rehabilitation department, about 300 have been personally interviewed by the rehabilitation supervisor, and 204 of those interviewed have been found to be good rehabilitation prospects. Sixty-one of these eligibles are undergoing, prior to rehabilitation proper, some form of preliminary service, such as physical restoration, fitting of artificial appliances, etc. Seventy-two others are ready now for training but are being held up on account of unfinished schooling, lack of

living maintenance provisions, unavailability of training opportunities, or some other circumstance. Seventy-one have been placed in training for definite occupations. The occupational objectives include the following: auto mechanics, architecture, artificial limb making, complete business course, dressmaking, law, lens grinding, linotype operating, ministry, motion picture projecting, poultry husbandry, radio expert, secretary for office, shoe repairing, stenography, tailoring, teaching, typewriter mechanics and watch and clock repairing. At the end of the fiscal year, only five had completed their course of training, three have been placed on jobs following training and the fourth has a job to be entered upon September 1.

The following is a brief account of the three cases now in employment and being followed up on the job:

N. D., a young man 21 years of age with his left leg off below the knee as a result of an industrial accident, was being supported by a county welfare department. Prior to disability, he had completed the eighth grade in public school, and had worked regularly as a common laborer. After receiving disability five years ago, he had been able to pick up only a few odd jobs for short periods. His case was brought to the attention of the rehabilitation department by the welfare agency which was supporting him. He was immediately placed in a barber college for training in barbering, and completed his course in three months at an expense of slightly less than \$65.00 to the rehabilitation department. He immediately secured employment in a barber shop in the city where trained where the prospect is more than good for his earning an independent livelihood.

Mrs. E. S., 28 years of age, lost her left leg when she was only a small girl. She dropped out of public school with but fifth grade education, and was married to a man 20 years her senior when she was only 15 or 16 years of age. She had never learned any skilled occupation, save that of housekeeping, and recently when the burden of supporting her small family devolved upon her, she was forced to appeal to the county welfare department for aid, and was brought to the attention of the rehabilitation department. She was placed in a beauty parlor for training in beauty culture at an expense of less than \$75.00 to the department. After completing about two-thirds of her course, she secured employment in beauty culture work at

an initial wage of \$20.00 per week. She has followed this employment regularly now for about three months.

Mr. W. T., age 26, was employed as a lineman for a light and power company, earning \$40.00 per week, when an electric light pole fell upon him crushing one of his legs which had to be amputated below the knee. He was immediately out of a job, and with a wife and two children was thrown upon relatives and the public for support. His case was brought to the attention of the rehabilitation department by the welfare department which was aiding his family. This welfare department supplied money to purchase the man an artificial leg. The rehabilitation department gave him a short period of training in auto mechanics sufficient for him to get acquainted with the mechanism of automobiles. At the same time, he was preparing to sue for damages the employer under whom he was injured. The rehabilitation department advised him and his attorney and his former employer to make settlement providing for his permanent employment with the light and power company. This was amicably done outside of court, the light and power company giving the man a satisfactory lump sum award and a job as truck driver for the company at a wage of \$27.50 per week.

CHAPTER IV

ELEMENTARY EDUCATION

INSPECTION VS. SUPERVISION

Supervision of schools in the city, the county, or the State had its origin in the idea of inspection. A study of the early duties and activities of city, county, and State school officials shows that inspection of schools rather than improvement of instruction was for a long time uppermost in the minds of those whose function it was to define such duties and activities. In our own State the idea of inspection of schools as a function of the State Superintendent and of the State Department of Public Instruction has found its way into our laws¹, but there is a growing tendency to think of the duties of state department representatives not as inspectorial but as co-operative and helpful. In 1913 the Legislature provided for two Rural School Inspectors, but one of the first persons appointed to one of these positions² in his first report said, "Since the day of my appointment to the position of State Rural School Inspector to the present time I have not thought or tried to impress others with the idea that the position carried with it detective duties or police powers." This aversion to being considered detectives, or inspectors—in the wrong sense of the word—has persisted in the minds of state department representatives to the present time, and during the biennium just closed the two Rural School Inspectors and the Supervisor of Elementary Schools, even though some of their duties have been those of inspection, have at all times endeavored to maintain an attitude of helpfulness and co-operation toward teachers and school officials.

¹ Chap. 5384, Acts 1905, Sec. 39, Laws of Florida. Also Chap. 6539, Acts 1913, Sec. 1, Laws of Florida.

² Report of Shelton Phillips, State Rural School Inspector, State Superintendent's Biennial Report, June 30, 1916.

PERSONNEL OF THE DIVISION

During the biennium for which this report is made Mrs. W. Austin Smith (formerly Miss Elise W. Partridge) and Miss Frances H. Clark have held the positions of State Rural School Inspectors and R. M. Evans that of State Supervisor of Elementary Schools. The three have worked together under what has been known as the Division of Elementary Supervision, and a brief summary of their activities is here given.

ACTIVITIES OF THE DIVISION

The three representatives of the division have during the two-year period engaged in numerous activities, but for the sake of brevity of statement these activities have been tabulated under a few general heads, such as (a) visits of supervisors, (b) conferences, (c) meetings attended, (d) contributions to programs, (e) testing demonstrations, (f) surveys, (g) preparation of publications, (h) demonstration lessons, and (i) miscellaneous activities.

VISITS OF SUPERVISORS

Much of the time of the Rural School Inspectors and the Elementary School Supervisor has been spent in visiting the schools, accompanied in the various counties by county superintendents. By means of such visits the needs of the schools have been studied and suggestions made for their improvement. The county superintendents, board members, principals, and teachers have everywhere shown a most commendable spirit of co-operation and have thus contributed both to the success of the work and to the happiness of the supervisors. The aims of the supervisory visits, as has been well stated by one of the State Rural School Inspectors, are "(1) to demonstrate to the county superintendent, the local school boards, the patrons of the schools, and to the civic organizations in each county visited the value of supervision in its relation to the function of the elementary school, (2) to co-operate wholeheartedly with all other agents involved in the education of boys and girls, and (3) to put forth especial effort to concur with the Department of Physical and Health Education in raising physical and health standards throughout the state."

During the two-year period the three representatives of the division have made visits as follows:

	1926-27	1927-28	Both
Counties Visited	67	67	134 ¹
Schools Visited	545	617	1,162 ²

CONFERENCES

It is pretty generally conceded that the conference is one of the most effective agencies for improvement of instruction and the accomplishment of worthwhile school objectives. The representatives of the elementary division have for that reason spent much time in that form of supervisory activity. In addition to participation on programs of supervisory conferences noted elsewhere in this report, the three representatives have held conferences as follows:

	1926-27	1927-28	Both
With County Superintendents	75	77	152
With County Supervisors	24	19	43
With Principals	409	462	871
With Teachers	404	410	814
With Board Members	13	17	30

MEETINGS ATTENDED

Attendance upon educational meetings, local, county, district, Statewide, regional and nationwide is most helpful to educators, giving them a broad outlook upon the advancement being made by the profession, and making them better prepared for the work they are doing in their own local spheres of activity. On account of the benefits to be derived from attendance upon educational meetings, representatives of the elementary division have, whenever possible, attended such gatherings and have taken part on the programs when asked to do so. The following table gives the extent of attendance upon such meetings by the members of the elementary staff:

	1926-27	1927-28	Both ³
County meetings attended	23	25	48
District meetings attended	12	15	27
State meetings attended	9	9	18
National meetings attended	3	3	6
Regional meetings attended (out of state)	2	0	2

¹ Each county visited twice during the two year period.

² Some schools visited a second time during the two year period.

³ Aggregate meetings for the three representatives of the Division.

CONTRIBUTIONS TO PROGRAMS

	1926-27	1927-28	Both
National Education Association	0	1	1
Florida Education Association	1	2	3
District Education Associations	9	13	22
County or Group Meetings	25	28	53
Parent-Teacher Associations	5	7	12
State Conferences of County and City Elementary Supervisors	5	5	10
Summer Schools	4	4	8
Stereopticon Lectures	8	3	11
Commencement Addresses	1	0	1
Arbor Day	1	0	1
Woman's Clubs	1	1	2
Luncheon Clubs	8	10	18
Chamber of Commerce	0	1	1
Armistice Day	1	0	1
Dedication of School Building	0	1	1
Negro Meetings	2	2	4

INSPECTION FOR STANDARDIZATION

The movement for standardization of elementary schools has made great progress during the biennium, and inasmuch as no school is considered for standardization by the State Board of Education until it has been inspected by a representative of the state department, many schools were inspected. In a report to the State Superintendent, one of the Rural School inspectors¹ stressed the importance of the movement for standardization of elementary schools when she said: "The requirements for standardizing schools have to do only indirectly with organization of subject matter and methods of instruction. However, they provide a school situation without which good teaching would be impossible. For this reason the importance of bringing the school up to standard was stressed in every school visited. For example, it was urged that teachers in schools with no chance of reaching even the lowest standard because of an improperly constructed building, lack of equipment, and a majority of poorly certificated teachers put forth intelligent effort to reach every standard possible and thereby, through the resulting improvement in the

¹ Miss Frances H. Clark.

children, to arouse interest in the community in co-operating with school authorities in further improving their schools."

The following are the numbers of elementary schools inspected and the numbers standardized¹:

	1926-27	1927-28	Both
Schools inspected for standardization	182	277	459
Schools standardized	58	181	239

TESTING DEMONSTRATIONS

For several years the Division of Elementary Supervision has had some part in Statewide programs for improvement of the teaching of certain common school subjects, and the members of the staff have assisted in these movements in every possible way. As they have gone about the State the supervisors have carried with them supplies of standard tests which they have used for giving demonstrations to one or two classes in each school where tests had not already been given, and in a few cases to groups of teachers. The purposes in giving these tests were (a) to demonstrate the results to be secured from giving standard tests and (b) to familiarize teachers and others with the procedure of giving and scoring the tests. The following is a statement of the extent of this activity:

	1926-27	1927-28	Both
Schools given reading tests	139	203	342
Schools given spelling tests	41	9	50
Schools given arithmetic tests	6	3	9
Schools given English tests	0	42	42

SCHOOL SURVEYS

During the two years quite a number of requests came to the state department for surveys of entire schools, and as far as possible all such requests were complied with. The surveys made were of two kinds, viz. (a) those measuring pupil achievement in school subjects, and (b) building surveys².

¹ For requirements for standardization, see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, July 1, 1928.

² In the building surveys the State Supervisor of Elementary Schools assisted the State Supervisor of High Schools and others.

The numbers of schools surveyed follows:

	1926-27	1927-28	Both
Achievement in school subjects (schools)	12	15	27
Building surveys (schools)	6	3	9

PREPARATION OF PUBLICATIONS

During the biennium the Division of Elementary Supervision has sent out from the State Department of Public Instruction quite a number of bulletins and other publications having to do with elementary school work, and there is herewith given a list of these publications with the date of issue of each:

1. The Teaching of Reading, September, 1926.
2. The Teaching of Reading, December, 1926.
3. The Teaching of Reading, April, 1927.
4. A Statewide Program for the Improvement of the Teaching of Reading, July, 1927.
5. Improvement of the Teaching of Reading, September, 1927.
6. Improvement of Oral and Written English, September, 1927.
7. Standards for Florida Elementary Schools, August, 1927.
8. Summaries of Conferences of Supervisors (2), 1927.
9. A Suggested List of Books for the Elementary School Library, January, 1927.
10. Bibliography of Professional Reading, 1927.
11. Remedial Measures in the Improvement of the Teaching of Reading, January, 1928.
12. Report on the State Program for the Improvement of the Teaching of Reading, July, 1928.
13. Report of the State Program for the Improvement of Oral and Written English, July, 1928.
14. Summary of Conference of Supervisors, 1928.
15. A Suggested List of Books for the Elementary School Library. (Now ready for publication), 1928.
16. Standards for Florida Elementary Schools, July 1, 1928.

DEMONSTRATION LESSONS

The demonstration lesson has come to be an important means of improvement of instruction, and it is pretty generally conceded that the supervisor can sometimes profitably demonstrate the teaching of a given lesson; but it is

also probably true that in most cases a group of teachers react more favorably to a demonstration lesson taught by one of their own number. The members of the elementary staff have, when occasion seemed to demand, taught demonstration lessons, and the numbers taught are given as follows:

	1926-27	1927-28	Both
Demonstration lessons taught	68	22	90

MISCELLANEOUS ACTIVITIES

In addition to the activities already noted the members of the elementary supervisory staff performed the following duties during the two-year period:

1. One member of the staff attended six meetings of the executive committee of the Florida Education Association.
2. One taught *Methods of Teaching Reading* for one week in a county Summer Normal School.
3. One taught for two summer sessions in a State University.
4. Two attended summer school out of the State.
5. Two served on district education program committees.
6. Two accompanied members of the State Educational Survey Staff on extensive field trips.
7. One conducted an annual countywide spelling contest.
8. One judged two educational exhibits at county fairs.
9. One observed work in the Horace Mann and Lincoln Schools in New York City.
10. Two observed nine teacher-training classes.
11. Two presided over sessions of the Regional Educational Conference held at Raleigh, N. C.
12. One presided over four state conferences of county and city supervisors.
13. Much time of members of the staff was spent in the office in preparation of materials for publications noted elsewhere in this report.
14. The members of the elementary staff have attended practically all the monthly meetings of the general staff of supervisors and have made verbal reports when called upon by the State Superintendent.

STATE-WIDE PROGRAMS

READING 1926-27

For a number of years prior to 1926 principals in several Florida schools gave standard tests in reading and other common school subjects, and made some effort to diagnose results and apply remedial measures in the teaching of those subjects. During the school year ending June 30, 1926 silent reading tests were given by members of the elementary staff of the State Department of Public Instruction in as many as six counties, besides a large number of towns and individual schools, and the scores made by pupils indicated that Florida boys and girls ranked far below accepted standards in reading. A definite attempt to improve the reading situation in one school¹ was productive of such excellent results that the principal was asked to explain his method of procedure to the principals of the State at their annual conference at Gainesville in April, 1926. As a result of the report made by the above mentioned principal the conference went on record as favoring a state-wide program for the improvement of the teaching of reading for the school year 1926-27 and asked that certain persons on the supervisory staff of the State Department of Public Instruction be requested to serve on the committee charged with the formulation of a program and the direction of the same.

The committee from the state department was authorized to call to its assistance as many persons as were thought to be necessary, and early in the summer the committee was enlarged to include five persons.

A program² for 1926-27 was adopted and put into operation, and met with a most hearty and generous response from the whole State. Three silent reading tests were given during the year, and 51,558 pupils in grades III-VIII were reached. Remedial teaching measures were suggested in bulletins sent out from the state department, speakers in fourteen district educational meetings told how reading might be improved, the Extension Division of the University of Florida gave a special course in The Teaching

¹ Lake City School, H. C. Johnson, Principal.

² See State Department Mimeographed Bulletin, The Teaching of Reading, September, 1926, or Harris-Donovan-Alexander's Supervision and Teaching of Reading, Chap. II, pages 30-43. Johnson Publishing Company.

of Reading and sent packages of library books to many schools, county superintendents, principals, supervisors, and teachers were tireless in their efforts for better reading, and the press of the State was most generous in its notices given to the movement.

Reports were sent to the State Supervisor of Elementary Schools on results of the three periods of testing³, and he directed the publication of a bulletin⁴ giving in detail the results of the state-wide program for the year.

Quoting from the above mentioned bulletin, "The state-wide program for the improvement of the teaching of reading has brought about good results of two rather distinct kinds, viz. (1) actual gain in comprehension and rate of reading on the part of thousands of Florida school children with the accompanying increase in skill on the part of many teachers; and (2) results of an indirect nature, but nevertheless very important."

The indefinite results were listed first and are as follows:

1. It has given the school people of Florida a common problem.
2. It has aroused the enthusiasm of pupils and teachers for definite achievement.
3. Teachers have been led to see that they can definitely measure achievement in a given school subject.
4. An intensive study of methods of teaching reading has been begun.
5. The importance of *silent reading* has been emphasized.
6. The importance of *rate* or *speed* of reading as compared with *comprehension* has been stressed.
7. Pupils have been led to read extensively, and the importance of libraries, reading circles, etc., has received much attention.
8. Drills for correct habits and skills have been given.
9. A beginning has been made in grouping children according to ability for purposes of instruction.
10. Teachers and pupils have been led to use graphs in portraying results in reading as well as in other school subjects.

³ Monroe's Silent Reading Test, Revised, Public School Publishing Company, Bloomington, Illinois, was used.

⁴ A Statewide Program for the Improvement of the Teaching of Reading, Florida School Bulletin, Vol. IV, No. 1, July, 1927.

The actual gain in comprehension and rate of reading for the year for the 51,558 pupils tested is given in median scores by grades, and is reckoned in years and months.

	<i>Comprehension</i>	<i>Rate</i>
Grade IV ¹	9 months	8 months
Grade V	1 year, 5 months	1 year, 2 months
Grade VI	8 months	9 months
Grade VII	1 year, 6 months	1 year, 1 month
Grade VIII	1 year, 8 months	1 year, 3 months

Inasmuch as a majority of the schools in which testing was done are eight months schools, we assume that each grade should have made eight months of "normal improvement" without the stimulus of the statewide program. Subtracting eight months from the above noted gains in each case we would have the net gain made by each grade as follows:

	<i>Comprehension</i>	<i>Rate</i>
Grade IV	1 month	0 month
Grade V	7 months	4 months
Grade VI	0 month	1 month
Grade VII	8 months	3 months
Grade VIII	10 months	5 months

READING AND ENGLISH

1927-28

The state-wide program for improvement of the teaching of reading met with general approval throughout the State, and in April 1927 both the High School Principals' Conference and the Conference of City and County Elementary Supervisors, which met during the same week at Gainesville, went on record as favoring the continuation of the reading program for another year and the addition to the program of improvement of oral and written English.

The state-wide program committee was enlarged to include ten persons instead of five, as during the first year of the work. Mimeographed directions for carrying on the

¹ Grade III could not be considered because the tables used did not give data for gains in that grade.

programs in reading and English¹, followed by materials suggesting remedial measures to be followed, were sent out from the state department during the year.²

Two reports on the reading and English programs were made to the State Supervisor of Elementary Schools, one in the fall of 1927 and one near the close of school in the spring of 1928, and the following is a brief statement of results given in certain reports³ made by the Division of Elementary Supervision:

- (1) The reading program (a) was given in full and two reports made in twenty counties, (b) three counties gave and reported upon one test, (c) thirty-five counties (other than a and b) made two reports in full, and (e) 71,409 children were reported to have been tested during the year.

Improvement in reading was not so marked in 1927-28 as in 1926-27, and the results in *rate* show a slight falling backward in grades VI, VII, and VIII. The actual gains or losses for the year are shown in the tabulation which follows:

	<i>Comprehension</i>	<i>Rate</i>
Grade IV	8 months	4 months
Grade V	9 months	6 months
Grade VI	5 months	-1 month
Grade VII	7 months	-2 months
Grade VIII	6 months	-2 months

Some reasons for the poorer showing for the second year may be given:

1. As the median scores of a grade approach the norm for that grade it is hard to make marked improvement. In other words, more marked improvement was made the first year because there was more room for improvement.

¹ See mimeographed bulletins, Improvement of the Teaching of Reading, State Department Public Instruction, September, 1927, and Improvement of Oral and Written English, State Department Public Instruction, September, 1927. Also for latter see Journal of Florida Education Association, October, 1927, pages 4, 5 and 15.

² See Remedial Measures in the Improvement of the Teaching of Reading, State Department of Public Instruction, January 1, 1928.

³ Report on the State Program for the Improvement of the Teaching of Reading, State Department Public Instruction, July, 1928, and Report on the State Program for the Improvement of Oral and Written English, State Department of Public Instruction, July, 1928.

2. Great numbers of pupils not tested the first year entered upon the program for the second year, and their scores had a tendency to lower rather than raise the median scores.
3. There was a slowing up of effort due to (a) a waning of enthusiasm after the "newness" of the plan had worn off, and (b) this being election year, political activities deflected attention away from the state-wide programs.

It is interesting at this point to show the standing of the various grades tested at the end of the year as compared with national standards.

	<i>Comprehension</i> <i>Below Standard</i>	<i>Rate</i> <i>Below Standard</i>
Grade III	3 months	7 months
Grade IV	4 months	9 months
Grade V	1 month	8 months
Grade VI	7 months	1 year, 4 months
Grade VII	7 months	2 years, 0 month
Grade VIII	5 months	2 years, 3 months

In *comprehension* this showing is very good when we consider that national grade norms are based on a ten months' school, whereas, the average Florida school tested does not have a term longer than eight months. The standing in *rate* indicates that we have an enormous task ahead of us in teaching children to get rapidly the-thought from the printed page.

- (2) The English program¹ (a) was given in full and two reports made in fourteen counties, (b) three counties gave and reported only one test, (c) twenty counties (other than reported under *a* and *b*) did some testing, (d) ten cities not included in *a* and *b* made two reports in full, and (e) 46,761 children were reported to have been tested in language during the year.

Marked improvement was made in the correction of language errors between the giving of the first test, near

¹ The Wilson Language Error Test, World Book Company, was used.

the beginning of the school year, in the fall of 1927, and the last near the close of school in the spring of 1928. The tabular arrangement of gains in years and months by grades, and the standing as compared with standard norms for this test are herewith given:

<i>Gain for Year</i>			<i>Standing End of Year</i>		
Grade	III	2 years, 2 months	Grade	III	1 year, 3 months*
Grade	IV	2 years, 6 months	Grade	IV	2 years, 1 month*
Grade	V	1 year, 9 months	Grade	V	1 year, 6 months*
Grade	VI	1 year, 2 months	Grade	VI	0 year, 9 months*
Grade	VII	1 year, 3 months	Grade	VII	0 year, 6 months*
Grade	VIII	1 year, 5 months	Grade	VIII	0 year, 3 months*
Grade	IX	1 year, 8 months	Grade	IX	0 year, 5 months*
Grade	X	1 year, 1 month	Grade	X	0 year, 1 month*
Grade	XI	0 year, 4 months	Grade	XI	0 year, 9 months†
Grade	XII	0 years, 2 months	Grade	XII	1 year, 2 months†

It will be noted from the above results that—

1. Gains were made by all grades III-XII.
2. The greatest gains were made in the lower grades.
3. The least gains were made in the upper grades.
4. There is a gradual decrease of gains from the lower to the higher grades.
5. Grades XI and XII are the only ones not up to the norms for this test.

CONFERENCES OF SUPERVISORS

The conference is conceded to be one of the best agencies for successful supervision, and inasmuch as an increasing number of county and city elementary supervisors are being employed from year to year in Florida, it has been thought wise to ask all the county and city supervisors of the State to come together from time to time to discuss common problems and to set for themselves specific objectives. Since the functions of the county superintendent and of the school principal are to a great extent supervisory the invitations to the supervisory conferences have included these people as well as those whose whole time is spent in supervision.

* Above normal.

† Below normal.

Four meetings¹ of supervisors have been held in response to invitations from the State Division of Elementary Supervision as follows:

1. At Orlando, September 10-11, 1926.
2. At Gainesville, April 13-14, 1927.
3. At Orlando, September 9-10, 1927.
4. At Gainesville, April 4, 1928.

These meetings were all largely attended, and there was an earnestness and enthusiasm about them that augurs well for better school work in Florida. A summary of each of these meetings was prepared and sent to all parts of the State soon after the meeting had been held, and in order that the nature of one of the meetings may be better understood a summary of the meeting held at Gainesville, April 4, 1928 is here given.

¹ These meetings do not include those held by the County and City Elementary Supervision each year in connection with the annual meeting of the Florida Education Association.

STANDARD ELEMENTARY SCHOOLS

There are herewith given the lists of elementary schools that have met requirements for standardization by the State Board of Education during the two years for which this report is made. For the year 1926-27 fifty-eight schools met all requirements for standardization, and for 1927-28 one hundred and eighty-one schools met all requirements and were placed on the list.

STANDARD ELEMENTARY SCHOOLS

FOR THE YEAR 1926-27

Group I—A school of ten or more teachers

Group III—A school of three to five teachers

Group II—A school of six to nine teachers

Group IV—A school of one or two teachers

A Standard School meets all Required points and at least 25% of the Flexible points.

A Superior School meets all Required points and at least 75% of the Flexible points.

(For requirements for standardization, see Standards for Florida Elementary Schools, published by the State Department of Public Instruction.)

STANDARD ELEMENTARY SCHOOLS

FOR THE YEAR 1928-29

Group I—A school of ten or more teachers.

Group III—A school of three to five teachers.

Group II—A school of six to nine teachers.

Group IV—A school of one or two teachers.

A Limited Standard School meets all Required points and at least 25% of the Flexible points, but the building need not measure up to all modern specifications.

A Regulation Standard School meets all Required points and 25% of all Flexible points.

A Superior Standard School meets all Required points and 75% of the Flexible points.

An Exceptional Standard School meets all Required points, 75% of the Flexible points, has no teachers with less training than two years beyond a standard high school, the building scores at least 900 on the Strayer-Engelhardt Score Card, has ample playground space, well-kept lawns, trees, flower beds, etc., and the spirit of the school such as to attract the favorable attention of the casual observer.

(For requirements for standardization see Standards for Florida Elementary Schools, published by the State Department of Public Instruction, August 1, 1927).

NEEDS OF ELEMENTARY SCHOOLS

Three years in the field have caused the State Supervisor of Elementary Schools to form some rather definite opinions with reference to the needs of Florida schools. There are in the State some schools perhaps as good as can be found anywhere, but there are many that fail to measure up to the very lowest accepted standards. The greatest inequality of educational opportunity exists, not only between different sections of the State, but often between districts in the same county. Frequently the distinct line drawn between urban and rural schools is such that the country child, because he happened to be born in a poor district, is automatically deprived of those school advantages that prepare for higher education or for efficient living. The short terms of school, taught by poorly prepared teachers, in buildings totally unfit for school purposes, cause boys and girls to become discouraged and drop out before reaching high school, and when this is the case the door of opportunity for higher education is forever shut in their faces.

Steady progress has been made by Florida schools within the last twenty-five years, and friends of education who have witnessed that forward movement have been made glad; but we are still far from the realization of ideal conditions. The recent provision for equalization of educational opportunity through State distribution of funds to counties unable to meet minimum educational requirements is a beginning in the right direction, and it is hoped that this movement so auspiciously begun may be allowed to go on without interruption until the urgent needs of every school and every child may be met.

Those who have given much thought to the subject consider the county the ideal unit for educational administration and supervision, and inasmuch as Florida is a county-unit State we now have the opportunity to develop our schools within the county as can not be done in those states whose schools are organized on the town, the township, or the district plan. This being the case, those citizens of Florida who are honestly seeking for the best plan of development of our school system should study the advantages of the county-unit plan before committing themselves to something that has proved less satisfactory when tried out in other states. Below is given a suggested list

of minimum requirements for a good county school system, though in offering this list it is realized that many items of merit may have been omitted.

COUNTY-UNIT REQUIREMENTS

1. A comprehensive plan of consolidation of schools arrived at through a scientific survey of the whole school situation.
2. A county superintendent who is trained for the work and who is capable of administering all of the schools of the county, urban and rural.
3. A school board to consist of five to seven members elected from the county at large, one member to be elected each year for a term of five or seven years (according to the number of members).
4. The county superintendent to be selected by the board and given freedom to originate and carry out plans not in conflict with the regulations of the board or the laws of the State.
5. An efficient staff of assistants to the superintendent selected by the board upon the recommendation of the superintendent.
6. Equal lengths of term for all schools of the county and a minimum length of term of eight months.
7. No new teacher to be employed after June 30, 1935, who has not had at least two years of training beyond graduation from a standard high school.
8. A uniform salary schedule providing for a minimum initial salary of \$800 per annum and an annual increase in salary upon evidence of increased efficiency as a teacher.
9. A well planned program of physical and health education.
10. Countywide 6-3-3 organization.
11. Adequate library facilities on a countywide basis.
12. All school buildings to be well planned and well constructed.
13. School plants to be planned as community centers.
14. A uniform tax rate for schools throughout the county.
15. An approved financial budget system for the entire school system.
16. County and State school funds distributed solely according to the needs of all the children.
17. An adequate system of school records and reports.
18. Strict enforcement of the compulsory attendance law.

URGENT IMMEDIATE NEEDS

If only two of all the things needful to be done for our schools can be done at once the following would be urgently recommended:

1. Provide one or more county supervisors, or helping teachers, for each county to assist the county superintendents in directing the work of young and inefficient teachers.
2. Provide some means for preventing the construction of school buildings not planned by competent school architects and approved by a competent school building expert attached to the office of the State Superintendent of Public Instruction.

SUMMARY OF PROGRAM
OF
SUPERVISORS' CONFERENCE

APRIL 4, 1928—GAINESVILLE, FLORIDA

The annual conference of elementary supervisors was held in Gainesville on April 4, 1928. This conference marked a high point in the development of elementary supervision in Florida. The far-reaching interest in this phase of school work is indicated by the persons attending and taking part in this conference.

Those registering included four county superintendents, twelve county supervisors, seventy-nine principals, ten class-room teachers, seven visitors, two representatives of book companies, six members of the state department, three faculty members from the Florida State College for Women, two from the University of Florida, one director from the Florida Public Health Association, and thirteen students from the University.

The central theme of the program was, *Improvement of Teaching Through Supervision*. Three aims of supervision were discussed during the morning session. Miss Mary Sheppard, State Supervisor of Teacher Training, spoke on the first aim, *To Improve Teachers in Service*. She referred to the two fundamental aims in supervision—the immediate aim, the improvement of the teaching act—the final aim, teacher growth. She referred to the recent meeting of county superintendents and board members as “one

of the most significant happenings of the year." At this meeting Dr. Strayer, Director of the State Survey, stated that "while pre-service training is important and essential, the conditions, environment, direction, and supervision under which a teacher works during her first four years of teaching have quite as much, or more, to do with the kind of teacher she ultimately becomes."

The responsibility that this doctrine places upon each supervisor demands a thoughtfully worked out program of supervision, based on conditions and needs, and formulated and carried out through the thorough understanding and complete co-operation of teachers and supervisors. The activities of the supervisor will include the selection and organization of materials of instruction, a study of the problems of teaching, the development and maintenance of morale, professional and semi-administrative duties in regard to the community and school, and above all else a very definite plan for the direct improvement of classroom teaching and a general improvement of teachers in service.

Miss Sheppard stressed the organization of groups of teachers for professional study, demonstration teaching, and group conferences based on the demonstration teaching. She said a number of such groups were already organized in the State. In the use of the demonstration lesson she emphasized the importance of preparation both on the part of the teacher and of those observing.

Mr. W. S. Yates, Supervisor of Rural Schools, Hillsborough County, led the discussion that followed this address. He suggested that better supervision might come through better teaching. He urged supervisors to recognize any good work being done by teachers and to bring this work to the attention of other teachers in the system. His point that a supervisor should develop and grow by observing the work of the efficient teachers in the system, gave food for thought. He mentioned and by his own personality, demonstrated the value of enthusiasm on the part of the supervisor. In addition to this, he referred to the benefits derived from the extension courses that are given to teachers while actually engaged in teaching.

Miss Dorothy I. Pratt, Supervisor of Tampa Elementary Schools, spoke on another aim of supervision. *To Lead Principals to do Supervision*. She discussed the amount of time that a principal should spend in supervision. In this connection she raised the question as to what activi-

ties may be included in supervision. Her answer was, that if the spirit of the act contributes towards the improvement of supervision, the act may be considered as supervisory.

She further suggested that a supervisory program for principals should consider as governing factors the following:

- I. An organization under which the principal works.
 1. He should be responsible for the individual teacher.
 2. He should be relieved of clerical work.
- II. Teaching Materials.
- III. A program of supervision originating in the classroom and formulated by teachers, principals, and administrative officials.
- IV. The use of graphs to stimulate the interest of teachers.
- V. Conferences with principals for the purpose of solving individual problems, such as—
 1. The teacher who sees no problems.
 2. Materials and supplies.
 3. The proper use of tests and measurements.
 4. The course of study applied locally.
 5. Definite effort to help teachers find newer and better methods.

Mr. C. L. Durrance, Supervisor of Orange County, led the discussion that followed. He emphasized the need of acquainting principals with the value of supervision, this to be furthered both by study and by experiment. Then he mentioned the importance of special preparation for supervision, particularly since many principals have taken training for administrative supervision rather than for instructional supervision. He urged that principals be relieved of clerical work and given ample time for supervision. Lastly, he suggested that principals should measure the results of their own activities.

The third aim, *To Improve the Written Examination*, was discussed by Miss Mary Holloway, Supervisor of Put-

nam County. She presented in a clear-cut, concise, and forceful manner the following ideas:

I. THE FUNCTION OF THE EXAMINATION.

1. Motivation.
2. Training in Written Expression.
3. Measurement.

II. TYPES OF EXAMINATIONS.

1. Essay.
2. Standard Tests.
3. Objective Tests.

III. OBJECTIONS TO ESSAY TYPE.

1. Unreliability due to subjective scoring.
2. Unreliability due to limited sampling.

IV. LIMITATIONS OF STANDARD TESTS.

1. They are too general.
2. They can be used only at certain times of the year.

V. OBJECTIVE TESTS BEST ANSWER THE PURPOSE.

1. They furnish motivation.
2. They measure accurately.
3. They furnish a wider sampling.
4. They eliminate subjective scoring.
5. They are specific.
6. They may be given at frequent intervals.

VI. Conclusion.

The next step is to train teachers to make and use examinations of this type.

Mr. R. L. Carter, Supervisor of Educational Tests, Volusia County, spoke briefly of the effective use of objective tests in the high schools of Volusia County. He distributed samples of history tests used and very generously offered to furnish on request tests on other subjects.

In the afternoon, Mr. W. E. Riggs, Superintendent of Indian River County, discussed *Supervision by the County Superintendents*. He told of the supervision that he had

done in his county. The guiding principle of his entire program is *Equal Opportunity to all Schools*. In securing this his procedure is as follows:

1. Select teachers carefully.
2. Establish in each teacher a consciousness of the superintendent's confidence and co-operation.
3. Maintain a definite nearness to each teacher.
4. Work with the individual child.
5. Organize study groups.
 - a. A three-day institute in the fall.
 - b. Monthly meeting of all teachers.
 - c. A weekly meeting of all principals.

He told briefly of his opportunity rooms for retarded children. Teachers for this work are chosen because of their personality, unlimited patience, and deep devotion to children. These qualities he placed first in importance.

Miss Frances H. Clark, State Rural School Inspector, spoke on *A County Program of Supervision*. In introducing her subject she stated that "the purpose of the course of study is to develop on the part of the child desirable habits of reaction to his environment." Following this she outlined the following principles:

- I. A superintendent is the administrator of his school system, but he is responsible for the educational objectives in his system and for the supervisory policies employed. Therefore, the superintendent and supervisor should, working together, lay out policies for the year's work.
- II. A supervisor is responsible for the methods by which objectives are attained.
- III. The supervisor and teachers should have the same objectives. In order to insure this, the county superintendent should call an initial conference of the entire teaching staff to meet with the supervisor to determine the needs of the school and the objectives to be set for their respective school communities and for the county as a whole.

- IV. As far as practicable, methods should be determined for attaining objectives. The following are suggested:
1. Teacher participation in community activities.
 2. Organization of subject matter of course of study with special reference to individual school environment.
 3. Classroom management.
 4. Method of class instruction.
 5. Periodic meetings of teachers.
 6. General supervision.
 7. Intensive supervision.
- V. It is advisable to encourage schools to publish any outstanding plan and methods of procedure.
- VI. County-wide play festivals, school fairs, etc., should be included in a county program of supervision.
- VII. A final check should be made to determine the extent to which pupils have formed desirable habits of reacting to their environment.

Mr. J. E. Rogers, Director of National Physical Education Service, New York City, spoke on *Supervised Play*. He showed in a most convincing manner that a school without ample playground is not functioning as completely as it should. He maintained that it is better to have a playground without a school than a school without a playground. He urged a well organized play program and stressed the inadvisability of undirected recreation.

The emphasis that he placed on sport for sportsmanship rather than athletics for the sake of a winning team was well received. He ruled against foot ball for the junior high school and showed in a most interesting manner the natural development of ball games from the simple games played in the lower elementary grades to the more strenuous and difficult games played by older children.

Mr. Rogers is an enthusiast and he received a warm response from the group. This was indicated by the wide range of pertinent questions that followed his address.

Dr. J. W. Norman, Dean of the School of Education, University of Florida, concluded the afternoon's program

with an address on *What Supervision Means to Florida*. Below are given some of his most significant statements:

"Supervision will reduce time consumption at least 50 percent."

"Administration is less difficult than supervision, though more is paid for it."

"The laws of science may be expressed in formulae, but the art of supervision is governed by principles."

"The art of supervision is the most difficult in the world."

"Supervision and teaching are a matter of judgment, not measurement."

The evening session was given to a *Report on State-wide Reading and English Program* by Miss Elise W. Partridge, State Rural School Inspector, and to the Formulation of Objectives for 1928-1929. Miss Partridge's report included a statement of the following points:

I. Results of English Program:

1. Number of counties reporting in whole or in part.
2. Progress made during first semester by each grade in the State.
3. Results in some supervised and some unsupervised counties.
4. Results in one large city system and in two smaller city systems.

II. Reading:

1. Number of counties reporting in whole or in part.
2. Results in a consolidated school 1926-1928.
3. Comparison of results in English and in reading in an unsupervised county.
4. Results in a small school where a certain grade was neglected.

Miss Partridge used slides to show these various situations. This report left no question in the minds of the group as to the advisability of continuing the reading and English programs during the year 1928-1929.

After an interesting discussion on Objectives for 1928-1929, the following were agreed upon by the committee:

OBJECTIVES FOR 1928-29

We recommend:

First:

(a) The continuation of the reading and English programs with especial emphasis upon its continuance in those counties not up to standard.

(b) That the schools of Florida give larger attention to the matter of providing an abundance of reading material for elementary children.

(c) That emphasis be placed on the carrying over of reading skills and habits into geography, history, science, etc.

Second:

As a major objective we recommend the improvement of arithmetic reasoning and fundamental operations.

Third:

We recommend that a definite objective of every elementary school in Florida be character guidance.

(Signed) G. V. FUGUITT,
DOROTHY I. PRATT,
R. L. CARTER,
W. E. RIGGS,
IRMA J. ROBISON.

The following report of the resolutions committee was adopted:

RESOLUTIONS OF THE COUNTY AND CITY
SUPERVISORS OF ELEMENTARY SCHOOLS

GAINESVILLE, FLORIDA

RESOLVED:

1. That we, the members of the County and City Supervisors of Elementary Conference express our hearty approval of, and appreciation for the co-operation of the University of Florida, and the Florida State College for Women, in adding to their curriculum courses in supervision.

2. That the thanks of this body be extended to the members of the State Department of Education, who have prepared the instructive and helpful program for this meeting, and who have contributed to its success.

3. That we express our indebtedness to each and every speaker, in making this a worthwhile occasion.

4. That we tender to the University of Florida thanks for its hospitality in providing the auditorium and hall for this meeting.

5. That we express our deep feeling of loss in the death of our esteemed fellow worker, R. M. Sealey.

(Signed) STELLA P. ARRINGTON,
W. S. YATES,
E. E. McCARTHY, JR.

The above report of the supervisors' conference is respectfully submitted by the committee on summaries:

(Signed) ELISE W. PARTRIDGE,
MARY HOLLOWAY,
A. R. RUSS.

 - c. White Private Schools.
 - d. Negro Private Schools.

I. INTRODUCTION

Although statistics for both years 1926-27 and 1927-28 are given in the following report it is principally a report for the year 1927-28, as the present State Supervisor of High Schools assumed the duties of the office July 1, 1927 and is, therefore, not very well acquainted with the work for the year 1926-27. The Statistics for Standard High Schools of 1926-27 were compiled by the predecessor of the present Supervisor, and the same plan has been followed by the latter for presenting the statistics for the year 1927-28.

II. SOME COMPARATIVE STATISTICS

There has been no attempt in the tables presented under this head to cover a given period of years common to all of them. The sources of information made this impossible as all information was not available for the same years. Each table is really a separate study.

GROWTH OF STANDARD HIGH SCHOOLS IN FLORIDA

Table I below gives for each year from 1909-10, the first year Florida had a High School Inspector and began seriously to attempt standardization of high schools, to 1927-28, the number of high schools accredited by the State, the number of high school teachers employed, the total enrollment in these schools, the enrollment in the twelfth grades in these schools, and the last two items as reported by the county superintendents.

These figures show a very rapid development of the high school in Florida. There has been almost a 300 per cent increase in the actual number of accredited high schools since 1909, about 1,200 per cent increase in the number of teachers employed, over 700 per cent increase in the number of pupils enrolled, and over 1,400 per cent increase in the number enrolled in grade twelve. The most rapid growth has occurred within the past seven years. Beginning with the year 1920-21 there were 70 accredited high schools, 14 less than in 1909-10. This number has steadily risen to reach 233 in 1927-28, an increase of over 330 per cent. The enrollment during this period has risen from 6,583 to 21,622, an increase of over 328 per cent. The number in the twelfth grade has risen from 872 to 5,204, an increase of over 596 per cent. This is an encouraging situation. The fact that the per cent of increase of pupils in the twelfth grade is almost twice the per cent of increase in the number of accredited high schools, and the per cent of increase in the number enrolled in these schools, indicates that the holding power of Florida high schools is increasing more rapidly than the number or enrollment of these schools.

TABLE I.

Column 1	2	3	4	5	6	7
DATE	No. Standard High Schools	No. High School Teachers in Standard Schools	No. Pupils in Standard High Schools, (Grades 9-12)	No. High School Pupils Reported by Co. Supts., (Grades 9-12)	No. Pupils in 12th Grade Standard High Schools	No. 12th Grade Pupils Reported by Co. Supts.
1909-10	84	195	3,034		360	
1910-11	73	200	3,235		325	
1911-12	83	226	3,685		390	
1912-13	82	260	4,264		458	666
1913-14	87	306	4,871		552	582
1914-15	97	345	5,149			761
1915-16	103	387	6,339		778	933
1916-17	61	433	5,560	9,823	701	1,198
1917-18	68	497	6,655	10,158	836	1,202
1918-19	81	438	7,767	10,320	1,028	1,215
1919-20	66	289	6,743	12,195	977	1,484
1920-21	70	273	6,583	14,521	872	1,726
1921-22	76	361	9,112	16,926	1,203	2,130
1922-23	91	467	11,752	19,663	1,778	2,613
1923-24	110	695	17,833	22,289	2,636	3,039
1924-25	126	723	17,628	25,708	2,718	3,622
1925-26	153	1,032	25,433	29,075	3,976	4,663
1926-27	185	1,753	20,599	38,333	5,084	5,519
1927-28	233	2,234	21,622	40,970	5,204	5,991

* Four-year high schools only.

It is interesting to note that although the enrollment dropped from 25,433 in 1925-26 to 20,599 in 1926-27, the number in grade twelve actually increased from 3,976 to 5,084 during the same interval. The enormous increase in enrollment between 1924-25 and 1925-26 and the sudden drop in enrollment between 1925-26 and 1926-27 is probably accounted for by the influx and subsequent outflow of population during the rise and fall of the Florida real estate boom.

DEVELOPMENT OF THE REORGANIZED HIGH SCHOOL IN FLORIDA

Section 178, Chapter 10291, Acts of 1925, legalizes the junior high school in Florida. The State Board of Education in September, 1926 passed regulations setting up standards for accrediting six types of reorganized high schools as indicated in Table II. In 1926-27, the first year the reorganized junior high schools were accredited by the State Board of Education, 70 of these reorganized public high schools were listed as standard, and 107 of the old four-year senior public high schools were listed. One year later 126 reorganized high schools were accredited and 103 of the 8-4 type. In 1926-27, 18,834 or 57 per cent of all public high school pupils were enrolled in the reorganized high schools. In 1927-28, 34,425, or 70 per cent of all public high school pupils were enrolled in reorganized high schools. These comparisons show a decided tendency away from the older 8-4 organization to the newer 6-3-3 and 6-6 types. The most popular type is the 6-year junior-senior high school, the increase being from 28 to 57 of this type in one year. The six-year high school is probably the best suited type for the middle-sized community and will likely increase in popularity.

Grand Total**	2,049	2,964	4,025	1,636	2,429			

* Per cent of Grand Total of high school graduates.

** The Grand Total is the sum of the totals in Table III and the Totals in Table IV.

There was over 100 per cent increase in the number of pupils graduating from accredited high schools in Florida in the four-year period from 1922-23 to 1926-27. The per cent of graduates entering higher institutions or continuing their schooling as post graduates and in nurses training schools is on the decline, being 49.3 per cent in 1922-23, 48.6 per cent in 1924-25, and 42.7 per cent in 1926-27. The actual number of high school graduates going to college is increasing, however. The actual number reported as entering occupations has fallen off slightly, and the decrease in per cent was from 44.5 in 1922-23 to 22.5 in 1926-27. Those reported as "unemployed" and "unknown" together, increased from 6.2 per cent of the total high school graduates in 1922-23 to 35.3 per cent in 1926-27. The most striking thing shown by these tables is that while in 1922-23 only 6.2 per cent of the graduates were unaccounted for by the last of October when these reports are made, in 1926-27, 27.1 per cent had been lost by this time—approximately five months after graduation. Some of our largest and best equipped schools are able to account only for those pupils who have entered college. This is a regrettable state of affairs. These schools should endeavor as a part of their vocational guidance programs to develop some system of follow-up records.

Another interesting tendency is the increasingly large numbers of graduates who are entering colleges outside of the state. This increase in the four-year period from 1922-23 to 1926-27 was from 27.6 per cent of all graduates entering college to 39.3 per cent. The State-supported colleges at Tallahassee and Gainesville dropped from 61.9 per cent of the total graduates entering college in 1922-23 to 48.5 per cent of all graduates entering college in 1926-27.

Although the ratio of boys to girls graduating from high school is about 2 to 3 and more girls than boys from among the graduates go to college, the percentage of boys among the graduates going to college is appreciably higher than is the case with the girls. Forty-seven and nine-tenths per cent of the total of boys graduating in 1927 went to higher institutions and only 37.3 per cent of the girls. A much larger percentage of girls are reported as "unemployed" or "unknown" than boys also. It is to be expected that a larger proportion of girls would be listed as unemployed but there seems to be no very good reason for losing so many more girls than boys.

III. SOURCES OF SUPPLY, EXPERIENCE, TENURE AND SALARIES OF FLORIDA HIGH SCHOOL PRINCIPALS

In the biennial report of the State Supervisor of High Schools for 1924-26 a table is given which shows that 49.7 per cent of the Florida high school principals in 1925-26 had been trained in colleges outside the state. In the fall of 1927 the present Supervisor sent out a questionnaire which was filled out and returned by 258 high school principals which collected information as to: (a) where Florida high school principals got their first experience in school work, (See Table V); (b) how many years they had been in their present positions; (c) how many years they had taught in Florida; (d) how many years they had taught elsewhere; and (e) the total number of years they had taught. The present year was counted in each case. These last four items have been tabulated and the results are shown in Table VI.

WHERE FLORIDA HIGH SCHOOL PRINCIPALS BEGAN THEIR TEACHING CAREERS

TABLE V.

Alabama	17	Mississippi	2
Arkansas	3	Missouri	9
Florida	119	Montana	1
Georgia	19	Nebraska	2
Idaho	1	New Jersey	1
Illinois	2	New York	2
Indiana	18	Ohio	7
Iowa	1	Oklahoma	1
Kansas	2	Pennsylvania	4
Kentucky	11	South Carolina	9
Louisiana	5	Tennessee	7
Maine	1	Texas	1
Maryland	1	Virginia	5
Massachusetts	1	Wisconsin	2
Michigan	2	England	1
Minnesota	1		

It is evident from the above table that Florida is importing her high school principals. They come to us from 29 states and one foreign country. One hundred nineteen or 46.1 per cent of these principals began their teaching careers in Florida, while 139, or 53.9 per cent did their first teaching outside the state. This is another corroboration of the findings in the 1926 report to the effect that Florida is not training an adequate number of high school principals.

Table VI is read as follows: 105 (40.7%) of these principals have had no teaching or administrative experience outside of Florida; 98 (37.9%) are doing their first year's work in their present positions, or, to put it another way the turnover in high school principals for the school year 1927-28 was 37.9 per cent; 20 (7.7%) are teaching their first year in Florida; 17 (6.6%) have had only one year's experience outside of Florida; 4 (1.6%) are in school work for the first time.

A number of rather significant things can be gotten from this table. As stated above the annual turnover is 37.9 per cent or about 3 out of every 8 high school principals in Florida are in charge of their respective schools for the first time. The fact that in 1924 the Supervisor's report shows a turnover of 33 per cent is an indication that the figures for 1927-28 are not exceptional, but that every year in Florida one-third or more of the high school principals are in new positions. Sixty-two and eight-tenths per cent are beginning their second year in their present positions, 78.3 per cent 3 years or less, and 88.4 per cent 5 years or less. Only 6, or 2.3 per cent, have a tenure of 10 years or more. This condition is a serious one. In the opinion of the present Supervisor, the extremely short tenure of high school principals and teachers is one of the greatest handicaps to progress in secondary education in Florida. To be of the most service to a community and its school a principal must be able to plan his work over a period of several years. The itinerant principal can never feel himself a part of the community and take the same personal interest in its problems as one who has some assurance that he will remain in the community over a period of years. If the real causes underlying the high turnover in principals and teachers can be found and definitely remedied we will have made a very noteworthy forward step in secondary education. Two probable causes are, low salaries, and one-year contracts. Well-trained principals of experience cannot be secured where the pay is small and the tenure so short. With the principals and faculties changing so rapidly it is impossible to have a school that will be a centralizing influence in the community or a community that will have more than an indifferent interest in the school. Transient principals will take only a transient interest in the school and community.

TABLE VII.

SALARIES OF HIGH SCHOOL PRINCIPALS DISTRIBUTED ACCORDING TO SIZE OF SCHOOLS, 1927-28

PRINCIPALS' SALARIES AND SIZE OF THE HIGH SCHOOLS

Table VII gives a distribution of high school principals' salaries in Florida for 1927-28 for the various sizes of schools. Schools with enrollments of over 500 are all grouped together and salaries above \$4,600 are grouped together. The number of salaries above 4,600 to \$4,800 are negligible, but there are 26 schools with a high school enrollment of over 500. The range in salaries is from \$1,000 to \$5,000. The median salary figured on this table is \$2,350.00. The arithmetic average is \$2,368+. The range in high school enrollment is from 13 in an isolated community where consolidation is impossible to 1,998, a large city junior high school. The largest senior high school enrollment is 1,332. It is readily seen from the table that there is an appreciable correlation between principal's salary and high school enrollment. This would be much higher but for two factors. Many of the principals are in charge of the elementary schools also, while the elementary school enrollment was not considered in this tabulation. This accounts to a large extent for the high salaries with small high school enrollments. The other factor is the small salaries paid to principals of the large junior high schools. There is still an idea extant that to teach or exercise supervision over senior high school students is worth more than to teach or exercise supervision over a junior high school or an elementary school. We need to come to the single salary schedule. Teachers and principals of junior high schools and of elementary schools should be required to measure up to quite as high standards as those in the senior high school and should be paid the same salary as principals and teachers in senior high schools for the same training, experience, tenure, teaching success, etc.

The median enrollment in Florida high schools is 98.79, while the range as stated above is from 13 to 1998. The 25 percentile—the enrollment below which 25 per cent of the schools fall and above which 75 per cent fall—is 53.8. The 75 percentile—the enrollment above which 25 per cent of the schools fall and below which 75 per cent of the schools fall is 200.3. To put it another way, the average enrollment of Florida high schools is approximately 100 pupils. Twenty-five per cent of them have less than 54 pupils enrolled, and twenty-five per cent have enrollments

exceeding 200. Thus it is seen that the typical Florida high school is small. Over half of them have enrollments under 100. This makes the per capita cost of high school training too great. There is very great need for consolidation of the high school grades in order to reduce this cost, especially with the present financial crisis. Some of our counties could cut the cost of high school education by an appreciable amount by consolidating small struggling high schools and at the same time provide much better school plants and better teachers also.

IV. SOME STANDARDIZATION DEVELOPMENTS

1. A DEFINITE DATE FOR ACCREDITING SCHOOLS

A large part of the time and energy of the State Supervisor of High Schools is necessarily consumed in the routine duties connected with the standardization of high schools. Up to the school year 1927-28 no definite date for making up the list of standard high schools had been set by the State Board of Education. Standardization reports could be sent in almost any time after the first month of the school year and schools were given practically the whole school year in which to meet requirements for standardization. This caused some confusion in the enforcement and interpretation of Article X of the regulations of the Southern Association, since this association gets out its list about December 1 of each year. It also necessitated the State Supervisor's devoting much of his time throughout the year to the routine correspondence and checking and re-checking of reports necessary to straighten out existing irregularities in the certification of teachers, the improvement of libraries and laboratories, sanitary conditions, etc., when his time might have been devoted to more constructive work.

Because of these conditions it was decided to set a definite date for publication of the List of Standard High Schools. December 1, 1927 was set as the date for publishing the list of accredited high schools for the school year 1927-28. County superintendents and principals were notified of this change in policy. The response from these school men was very good and although it placed a tremendous amount of work on the office force to do the checking and correspondence necessary in so short a time,

the work was all done on time and 233 high schools were placed on the State List of Standard High Schools—an increase of 48 over the previous year. This showed beyond all doubt that it was feasible for schools to meet requirements for accreditation early in the school year rather than after most of the year's work had been completed. The State Committee of the Southern Association shows some disposition to use the current year's list of state-accredited high schools instead of the list of the preceding year in enforcing Article X of the Southern Association regulations. I think as soon as it is conclusively shown that schools can meet State requirements by the first of December that this committee will agree to take the current year's list as a basis for enforcing Article X. This will prove much more satisfactory to all concerned.

2. ELEMENTARY SCHOOLS NOT TO BE NEGLECTED

A revision of the Bulletin, *Standards and Programs of Studies for Florida High Schools*, was made during the year and submitted to the State Board of Education for its approval. This approval was given August 1, 1928. A number of changes of a minor nature were made in these standards, but probably the most significant were those relating to the elementary schools. The edition of the Standards of date of September, 1926 made provision that, "No high school will be listed as a standard school so long as it appears that this department is being maintained at the expense of the elementary school with which it is connected. Elementary schools should have the same length of term as the high schools with which they are connected." On August 1, 1928 the State Board of Education passed the following additional regulations bearing on this subject: "Beginning with the school year 1930-31, no high school will be accredited by the State Board of Education unless the elementary school with which it is connected has the same length of term as the high school. Beginning with the school year 1931-32, no high school will be accredited by the State Board of Education unless the elementary school with which it is connected is also accredited by said Board." This is a very important step, as it is not the part of justice or wisdom for the great minority of our school population enrolled in our elementary schools to be neglected for the benefit of the minority enrolled in our high schools. These regulations

were made effective in two and three years respectively so as to give school authorities time in which to make the necessary adjustments for meeting these requirements.

3. STANDARDIZATION OF NEGRO HIGH SCHOOLS

With the co-operation of the State Supervisor of Negro Schools an effort has been made to increase the interest of Negro high school principals in the standardization of their high schools. This effort was in some measure rewarded, as a larger number of Negro schools made application than during any previous year and a larger number were accredited. We have every reason to believe that this interest will continue to increase. The first Negro high school to meet standardization requirements was Central Academy at Palatka. This was in 1924-25. In 1925-26 two Negro high schools were listed; in 1926-27 two; while in 1927-28 seven of these schools were listed as standard by the State Board of Education. It is hoped that this interest will continue and many more of these schools will be brought up to standard. The Negro schools are accredited by the same standards as the white schools and are given the same inspection service.

V. RESUME OF THE YEAR'S ACTIVITIES

It is not possible or desirable to give a complete resume of the year's work. Only such items are included as were considered of enough significance at the time to include in the Supervisor's Monthly Reports to the State Superintendent of Public Instruction.

During the school year 1927-28 the Supervisor of High Schools spent a total of 135 days working in the office, attending to correspondence, checking Standardization Report of principals, planning programs for educational meetings, preparing addresses, conferring with the many visiting school men and women who from time to time drop into the office with their problems, and doing the other routine matters that are incumbent upon him. In addition to these office duties there are other supervisory functions, such as visiting schools, attending educational meetings, making commencement addresses, holding conferences, attending committee meetings, which consume a great deal of the Supervisor's time. He has spent a

total of 151 days of the school year in discharging these duties, and in travel necessary to performing them. To put it another way 52.8 per cent of his working time was spent in the field and 47.2 per cent in the office. Taking the months from September through May when the schools were actually in session, 61.9 per cent of his time was spent in the field and 38.1 per cent in the office.

In the discharge of field duties the Supervisor of High Schools visited 155 schools in 53 counties, held or participated in 27 conferences and committee meetings, attended 17 educational meetings, one of which was outside the State of Florida, made 25 addresses of an educational nature, and delivered 5 commencement addresses.

On the whole the year's work has been profitable and satisfactory. The most discouraging feature is the fact that the task is so large, and the field so great that the Supervisor never feels that he has done anything like as much as the situation demands. "So much to do; so little done" is the feeling with which he looks back upon the year. An assistant to assist in the inspection work as well as the office routine would greatly lighten the load and increase the usefulness of the division to the schools of the State.

VI. RECOMMENDATIONS

The present Supervisor hesitates to make recommendations at this time with the Educational Survey being presented, however, a few matters might be mentioned for emphasis, if nothing more, also some of them may not have been considered by the Survey. No attempt is made to list them in order of importance. Attention is respectfully called to the advisability of providing for the following:

1. A Division of School Buildings and Standards in the State Department of Public Instruction under the direction of a man trained in this field, with power to work out standards and approve architects' plans for Florida school buildings would save the people of Florida many times over the cost of maintaining such a department and would give them at the same time better buildings for their money.

2. A Division of Statistics and Information would be a wise investment. Although the returns from such an investment cannot be measured in terms of monetary values,

its possibilities as a means for study and solution of educational problems would be far-reaching.

3. A good beginning has been made in high school curriculum work by former supervisors working through committees of teachers and principals. In this way some very splendid material for bulletins on the teaching of several of the high school subjects have been prepared and printed. This work has had to stop, however, for lack of funds to publish this material. So great has been the demand for these bulletins that the supply has been exhausted. Hundreds of requests have come to the office for these bulletins and for others on subjects for which none have been prepared. It is strongly recommended that sufficient funds be made available for carrying on this work. The cost will be amply justified by the improvement in instruction that will result. The state department should be able to furnish leadership in this field and unless it does, teachers are going to look elsewhere for guidance. This will result in a group of non-uniform courses of study, some of which for lack of proper direction will be very poor.

4. More clerical assistance is needed by the Supervisor of High Schools if the schools are to get the most for the investment made by the State in paying the salary of the State Supervisor. A full-time secretary and clerk could be kept profitably employed the year round and during certain rush periods, additional clerical help would free the Supervisor for more important duties.

5. The task of high school supervision in Florida has grown to the point where it would seem advisable to provide an assistant to the Supervisor. In 1920-21 there were 70 State-accredited high schools, with a faculty of 273 teachers, and an enrollment of 6,583 pupils, while in 1927-28 there were 233 such schools, with a faculty of 2,234 teachers and an enrollment of 21,622 pupils. It is impossible for one Supervisor to anywhere near meet the demands upon his time in office and field.

6. A budget of the fund allowed for printing and mimeographed material which would permit of each Supervisor's knowing approximately how much he would be allowed to spend would greatly assist the supervisors in planning their year's work. These budgeted funds should still be spent with the approval of the State Superintendent.

CHAPTER VI.

TEACHER-TRAINING IN HIGH SCHOOLS

- I. During the biennium teacher-training work in the high schools has shown progress in number of departments maintained, number of pupils enrolled, organization of the work, and quality of results produced. The Tentative Course of Study in Teacher-Training issued September, 1926 made some changes that greatly improved the teacher-training course and gave to the departments definite directions for procedure that have tended to make the work more uniform over the State. Provision for direct supervision made by the Legislature of 1927 has made it possible to further systematize the work done in these departments and to begin some study of their graduates. The State Supervisor during the year has attempted to organize her activities around the following objectives:
 1. Through group conferences and personal visitation to better acquaint county superintendents, principals, and teachers with the aims and general plans for teacher-training in high schools and thus secure better co-operation of administrators and teachers in such matters as selection of students for teacher-training departments, provision for professional libraries and other equipment, supervision of observation and practice teaching, selection of properly qualified teachers, etc.
 2. To interpret to the teachers the course of study and to make suggestions as to application of this course to the particular situation.
 3. To visit each department at least twice during the year, observe the teaching done, conduct conference with the teacher on the basis of the observation, study points of general organization and instruction in both elementary and high school that affect the efficiency of the Teacher-Training department and confer with the principal and the county superintendent about the same.
 4. To further assist teachers through mimeographed bulletins and outlines and through correspondence based on their monthly reports to the State office.

5. To emphasize the importance of definite, systematic plans for observation and practice teaching and assist directly in instituting such plans.
6. To begin gathering material for revision of the Teacher-Training course of Study.
7. To begin some study of the graduates of the teacher-training departments, their placement, tenure and success in teaching.
8. To encourage definite plans on the part of county superintendents and principals for programs of group study of teachers in service.
9. To keep in touch with general educational development through reading and attendance on professional meetings.
10. To study general conditions throughout the State relative to the training of teachers, and to the supply and demand for the same.

II. Disposition of the time of the State Supervisor.

By survey of actual days of service from the time the State Supervisor reported for duty, September 6, 1927, to the close of the year, June 30, 1928, it is found that 41% of the time was spent in the office, 40% in field supervision, 15% in attending professional meetings, and 4% in vacation and sick leave. Number of supervisory visits made to Teacher-Training departments during the year—80. Number of visits to schools *not* directly doing Teacher-Training—29.

Professional Meetings Attended:

Dept. of Superintendence, N. E. A.—Boston.

Southern Association of Accredited Colleges and Secondary Schools.—Jacksonville.

Annual Meeting of Florida Education Association.—Tampa.

Annual Meeting of County Superintendents.—Jacksonville.

Annual Conference of Supervisors.—Orlando.

Annual Conference of High School Principals.—Gainesville.

State Meeting of Junior Music Clubs and Parent-Teacher Association.—Lakeland.

Six District Meetings of Florida Education Association at Tallahassee, Orlando, Brooksville, Gainesville, Perry, DeFuniak Springs.

One County Meeting of Teachers at Jasper.

III. Summaries of Some Phases of Teacher-Training Work in Florida High Schools:

A. AIMS:

1. To encourage those who will teach without college training to graduate from high school.
2. To give to such students an elementary course in education.
3. To raise the standard of training of rural teachers to the level of high school graduation.
4. To orient the subject of teaching to encourage more to enter teachers' courses in college.

B. CURRICULUM:

Three units in Education:

- 1st unit—11th grade—Review of elementary subjects with methods.
- 2nd unit—12th grade—Review of elementary subjects, with methods.
- 3rd unit—12th grade—Observation, Participation and practice teaching.

Psychology:

A teacher-training graduate must complete those subjects required for graduation from a standard high school of Florida. The three professional units and the psychology are counted as part of the sixteen units required for graduation.

(Note.—All specific subject requirements other than the above were removed by special resolution of the State Board of Education in May, 1927.)

C. TEACHERS:

1. Number of teachers doing Teacher-Training work 1927-28 36
2. Minimum salary: Negro.....\$112.00 per month
White\$125.00 per month
Maximum salary\$250.00 per month
Average salary\$148.00 per month
3. Number of teachers who are college graduates.... 36
4. Number of teachers who have M. A. degrees or have done some post-graduate work 14
5. Number new in present position, 1927-28 25
6. Number new in Teacher-training work, 1927-28 23

D. SUPERVISION:

1. By supervising principal.
2. By county superintendent.
3. By state supervisor:
 - a. Personal visitation—at least twice per year.
 - b. Group conferences—at all education meetings.
 - c. Bulletins, outlines—correspondence on basis of monthly reports.

E. RESULTS:

(The law providing for Teacher-Training in High Schools in its present form was passed in 1923.)

1. Number of Schools offering Teacher-Training:

1923-24.....	8	1926-27.....	31
1924-25.....	16	1927-28.....	36
1925-26.....	24		

2. Enrollment in Teacher-Training classes:

1923-24.....	121	1926-27.....	662
1924-25.....	344	1927-28.....	850
1925-26.....	488		

3. Certification of Teacher-Training graduates in High Schools:

1923-24.....	21	1927-28 (up to Aug. 15)....	198
1924-25.....	35		
1925-26.....	123	Total.....	539
1926-27.....	162		

4. What becomes of graduates of Teacher-Training Departments?

Number pupils enrolled Senior Teacher-Training Courses, 1926-27	196
Number pupils granted certificates to teach.....	162
Number pupils reported teaching 1927-28	*105
Of the 196 Seniors of 1926-27:	
Number attending college 1927-28	22
Number otherwise employed this year.....	6
Number unemployed (married)	63
Number not reported	105

* The State Supervisor made it a point to visit wherever possible the graduates of teacher-training departments who were teaching. Such observations lead to the statement that these graduates are, in the majority of cases, doing work superior to that done by teachers whose certification rests on examination only.

In further effort to study the teaching done by these teacher-training graduates, the following rating scale, with the introductory letter, was sent to principals and county superintendents employing the 105 graduates of 1926-27 reported teaching during term of 1927-28

STATE OF FLORIDA
DEPARTMENT OF PUBLIC INSTRUCTION

TALLAHASSEE, MARCH 30, 1928.

Dear Principals and County Superintendents:

We realize that the surest test of the quality of work being done in the Teacher-Training classes in the Florida High Schools is in the success of the graduates who are actually teaching in the schools. For that reason we are asking that you give us your frank estimate of the Teacher-Training graduates who are working under your supervision. Will you try to evaluate these teachers in terms of the teachings you have seen done in your county or school, letting A stand for the best, B satisfactory, C mediocre, D the poorest—unsatisfactory.

We are inclosing blanks carrying rating scale. If you see fit to do so, you might go over this rating sheet with your teachers as a device in supervision. We shall greatly appreciate it if you will make out a blank for each of the Teacher-Training graduates under your supervision and forward to this office. We assure you that any information will be used entirely in a professional manner.

Sincerely yours,

MARY SHEPPARD,
State Supervisor of Teacher-Training.

A RATING SCALE OF TEACHER-TRAINING GRADUATES

Name of Teacher.....Graduated from.....H. S.

Present Teaching Position (School).....Grade.....

Teaching Positions held previous to this year:.....

Date of Rating.....By whom.....

	A	B	C	D
I. Skill in Teaching.				
(a) Knowledge of subject matter.				
(b) Selection and use of materials outside of texts.				
(c) Clearly defined aims.				
(d) Lessons carefully planned to accomplish these aims.				
(e) Ability to secure pupil activity in recitation.				
(f) Skill in making assignments.				
II. Skill in Managing a Class.				
(a) Order — or discipline — resulting from interest — not compulsion or suppression.				
(b) Routine of getting in and out of room—passing materials, etc., economically and systematically organized.				
(c) Attention to details of heat, light, ventilation.				
(d) Neatness of room.				
III. Team-work Qualities.				
(a) Co-operation with administrators and teachers.				

A RATING SCALE OF TEACHER-TRAINING GRADUATES (Continued)

Name of Teacher.....Graduated from.....H. S.
 Present Teaching Position (School).....Grade.....
 Teaching Positions held previous to this year:.....
 Date of Rating.....By whom.....

	A	B	C	D
IV. Professional Growth.				
(a) Reading of professional books and magazines.				
(b) Extension courses and summer schools.				
V. Personal and Social Qualities.				
(a) Personal appearance.				
(b) Popularity among students.				
(c) Popularity among teachers.				
(d) Value to community.				

Put any additional information on opposite side of this sheet.

In response to this request twenty-one principals and county superintendents gave ratings on fifty-four teachers. The average rating assigned was B+.

IV. Conclusions.

After a year's observation the writer offers the following conclusions and suggestions:

1. The best type of work in High School Teacher-Training is being done by teachers whose college training has emphasized elementary education and who have had some experience in teaching in elementary school. It would seem that the content of the college course and type of experience should receive serious consideration in selecting teachers for the High School Teacher-Training departments.

2. There is a serious shortage of capable teachers willing to accept the salaries offered. If State aid to each department could be increased and the minimum salary (now \$1,000) be raised, efficient teachers might be secured. Sixteen of the twenty-three states providing for High School Teacher-Training work in 1923 gave aid to extent of \$750.00 or more to each department.

3. Splendid results are being accomplished in the three schools in which the Teacher-Training teacher spends part time in supervision in the elementary school. We recommend this plan wherever it is possible.

4. The state regulation restricting admission of post graduates to Teacher-Training courses seems to perplex many school officials over the state. In five states the curriculum for Teacher-Training in high schools is concentrated in a fifth year and occupies the full time of the student. Is there not a possibility of permitting this development in the few larger schools in the state now interested in organizing Junior College work?

5. We find over the state a few principals permitting students to elect one-half or one unit of Teacher-Training work to fill out a course and complete sixteen units for graduation.

Students who enter the courses for these reasons seriously hinder the work of the classes and could better use their time in other courses. We recommend a regulation by the State Board of Education forbidding this practice.

6. The change in certification of Teacher-Training graduates from First to Second Grade, was, in our opinion, a decided improvement.

7. The proper placement of the Teacher-Training graduates constitutes a problem. Some schools are making the serious mistake of placing too many of their own graduates in their elementary grades. If, in filling vacancies in rural and small elementary schools, preference could be given to these graduates, the purpose of the plan could better be fulfilled.

8. Some excellent work is being done in several counties, notably in those employing supervisors, in training of teachers in service through reading circle and group-study. We recommend this idea to all school administrators and supervisors.

* Initiating work.

STATE SCHOLARSHIPS

Matters pertaining to State Scholarships have been handled by the State Supervisor of Teacher-Training. Senate Bill No. 284 of the Legislature of 1927—amending Chapter 9134 of the Acts of 1923, Relating to Scholarships in the Two State Institutions of Higher Learning provided for one scholarship for each senatorial district and one county scholarship for each member of the State Legislature—to each of the State institutions of higher learning. In accordance with this law there were available last year (1927-28) 38 senatorial scholarships and 95 county scholarships to each institution. Of the total number of 266 scholarships available, 200 were used last year. It is hoped that all vacancies for 1928-29 will be filled by the examination on August 10, 1928.

It is gratifying to note that several of those who used the county scholarships during the years immediately following the passage of the original law in 1923, are arranging with this office for the cancellation of notes satisfied by two years of teaching in the public schools of the State. We hope within the coming year to collect and compile definite information regarding these State Scholarships to show to what extent they are functioning to increase the supply of trained teachers in the State.

CHAPTER VII.

SUMMARY OF ACTIVITIES OF THE STATE SUPERVISOR OF PHYSICAL AND HEALTH EDUCATION

Visited schools, attended meetings and health conferences in forty-three counties of the State.

Worked two counties intensively on county-wide basis, visiting every school in each county.

Visited one hundred twenty-three schools.

Held one hundred twenty-four conferences.

Attended forty-two meetings.

Made thirty-five talks at the different meetings.

Attended nine committee meetings.

Attended nine of the district meetings of the Florida Educational Association.

Sent from our office five thousand class-room weight-height-age charts to the schools of the State.

Sent two thousand physical and health education score cards to superintendents, principals, and nurses of the State.

Tabulated the results of the score cards which were returned to this department after the schools had evaluated their physical and health education program.

Sent out bulletins for Temperance and Health Day to all superintendents.

Prepared a list of library books on physical and health education. This list was sent to superintendents, principals, and teachers.

Prepared a bulletin on school site and play areas. This bulletin was mailed to all county superintendents and a few teachers.

Arranged an exhibit of physical and health education for the state meeting in the Florida Educational Association. Put up small exhibits at four of the district meetings. These exhibits included books, bulletins, charts, publication lists and other material that might be of use in the physical and health educational program.

The following report is made in the form of a study of the field of a State program of physical and health education. This seems to be the best way to analyze the jobs to be done, the objectives to be attained, and the aims toward which we should work, so that our efforts will be directed in the most effective way.

PHYSICAL AND HEALTH EDUCATION IN FLORIDA

I. THE REGULATION:

The regulation regarding Physical and Health Education is in keeping with the practice in other states.

35 states or 73 per cent have such regulations or laws.

30 states or 62.7 per cent have definite programs.

20 states or 41.6 per cent have state supervisors.

The regulation is passed by the State Board of Education and has the force of law. This arrangement is good, because an act of the Legislature is not required in order to modify the regulation.

The Standard and Programs of Studies for High Schools, a bulletin issued by the State Department of Public Instruction, lists (on page 27) Physical Education as required of all pupils throughout the high school course. Listed below are the notes on the Physical and Health Education program from page 36 of the same bulletin.

HEALTH AND PHYSICAL EDUCATION

"The minimum time requirement for health and physical education is two 45-minute periods per week. At least one-fourth of this time should be devoted to health instruction. It is strongly recommended, however, that a full period each day throughout the high school course be devoted to health and physical education. The major portion of the time for this subject should be devoted to plays and games.

Credit for this subject must not be counted toward graduation in any school until after that school's course of study in this subject has been submitted to the State Department of Public Instruction and has received the approval of the State Supervisor of Health and Physical Education.

A pupil's participation in the usual forms of high

school athletic practice after school hours does not constitute sufficient reason for excusing such a pupil from participation in the activities of the regular period for this subject. If convenient, these pupils may be separately grouped and given additional athletic practice or instruction during the physical education period."

The regulation could be improved by some form of subsidy or financial aid to counties or schools where such aid is needed to promote the physical and health education program. That the work is not well distributed over the State is shown by the list of teachers of physical and health education, and the counties in which they are located:

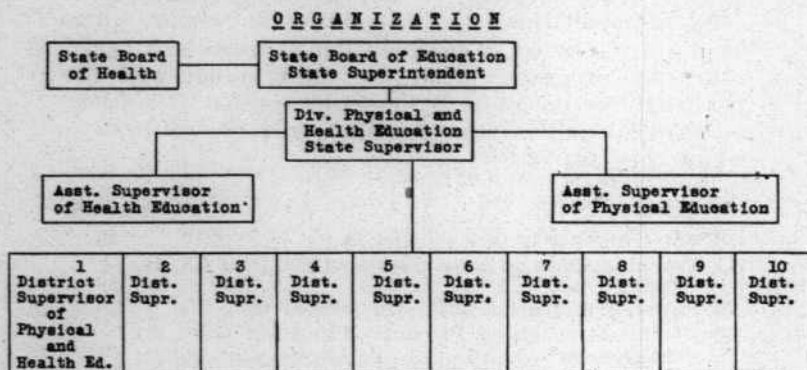

<i>Teachers</i>	<i>Counties</i>
158 Total number of, are located in	39
111 Teaching three or more classes of Physical Ed. are located in	29
74 Physical Education only, are located in	20
52 Of the 74 teaching Physical Education only, are located in	6

Alabama meets this problem by requiring that the county and city Boards of Education shall establish and maintain approved physical and health education programs in order to receive state aid from the Attendance Fund.

"Section 19. That the Attendance Fund provided for in Section 2 of this Act shall be apportioned to the several counties of the State in proportion to the aggregate attendance during the year next preceding that for which the apportionment is being made; provided that in order that the best interests of education may be conserved by the expenditure of this fund, county and city boards of education shall establish and maintain approved attendance, physical and health education programs as required by law and the regulations of the State Board of Education. It shall be the duty of the State Board of Education before making apportionment of the Attendance Fund to see that the conditions herein prescribed have been met by all counties and cities participating in the apportionment of this Fund."

Virginia has a budget for \$25,000 to use in promoting physical and health education programs. The fund was, until the present year, used to supplement, up

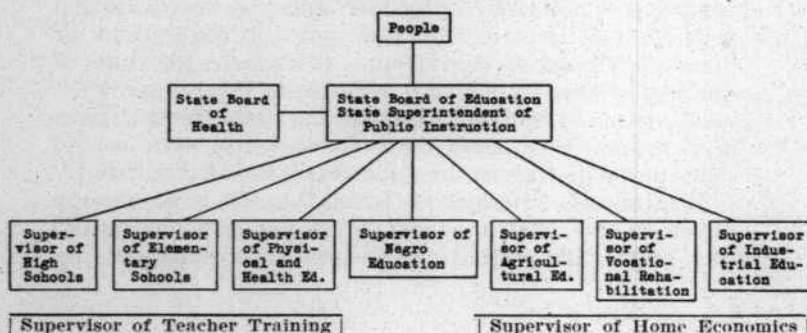

to 50%, the salaries of county supervisors of physical and health education. After getting the work strongly entrenched in several counties, aid to the counties was withdrawn this year and the State divided into ten districts in order to carry the program to all communities. The fund of \$25,000 was used to pay salary and traveling expenses of these ten supervisors. The Virginia plan is organized as outlined:

II. THE ORGANIZATION:

The organization of the physical and health education is good in that it is an integral part of the Department of Public Instruction. The Supervisor is on equal footing with other supervisors and directly responsible to the State Superintendent. This decision is wise, because it ties up the program of physical and health education with the other educational programs, such as: teacher-training, certification, standardization of schools, school attendance, etc. Each program has its contribution to the success of the others.

DIAGRAM OF THE ORGANIZATION

III. THE TITLE:

The title of physical and health education as applied to Supervisor and Program is in keeping with the tendency over the United States. Of the 17 states in which the state departments employ State Supervisors of Physical and (or) Health Education:

8 states use the combined name.

7 states use Physical Education; but 5 of the 7 supervisors of these states also have charge of the health program in the schools.

1 state uses only the name Health Education, but the Supervisor also has charge of physical education.

1 state uses the name Physical Education and Athletics, but the Supervisor also has charge of the school health program.

The program of physical and health education included under this title, the promotion of which should be the duty of the State Supervisor of Physical and Health Education, may be listed in the following way:

A. PHYSICAL EDUCATION:

The aim of physical education may be stated in the following way: To develop in the school children of today, the habits, attitudes, knowledge, and skills that will secure and maintain health, happiness, and efficiency to the greatest degree; to provide trained leadership of children in properly classified activities that will insure their highest development mentally, physically, morally, and socially.

In order to obtain this aim, five things must be done by the school administrator:

1. *Space and Facilities*—Sufficient outdoor and indoor plants must be provided. The indoor plant includes gymnasiums, playrooms, special exercise rooms, locker rooms, shower rooms. The outdoor plant includes play fields and surfaced play courts for both boys and girls, sufficient for the entire school enrollment. Equipment such as apparatus, goals, lockers,

should be provided. Supplies—such as balls, bats, and nets, etc., which will wear out with use, should be put on the same basis as other laboratory supplies.

2. *Trained Leadership*—Special teachers who have had training in physical and health education courses with degrees in education, should have control of the physical and health education program which includes athletics. Every classroom teacher should have approximately six hours in physical and health education.

3. *Classification of Pupils*—Examinations and motorability tests should be given for classifying the pupils into groups so that they can be given a more effective program that has been graded and tested.

4. *Time Allotment*—Provision must be made in the school program for sufficient allotment to give a program that will mean most to the pupils.

5. *Program*—A natural program which had been graded and tested should be worked out to meet the interests and needs of the individual locality and child.

1. ELEMENTARY SCHOOLS:

Programs may consist of rhythms, story plays, relief periods, free exercises, marching tactics, athletics, games and stunts.

At the present time most of the work in elementary schools is done by the regular classroom teacher with some aid from the elementary supervisors. In a few cases special teachers are employed to work with the class-room teacher, and with the children in the upper grades.

The junior and senior high schools in Pinellas county organized districts of elementary schools for the purpose of promoting games and plays. At Fort Pierce, Florida, the high school physical education director gave help and instruction to the class-room teacher regarding physical education, and in some cases directed their physical education program. Fifteen minutes per day is required for physical education in all elementary schools in Florida.

2. JUNIOR AND SENIOR HIGH SCHOOL PROGRAM :

The junior and senior high school program may include :

- a. Play-games, play-days, athletics.
- b. Individual and group corrective gymnastics.
- c. Dramatics and dancing, which include such things as festivals, pageants, etc.
- d. Self-testing activities, stunts, and motor-ability tests.
- e. Fundamental skills, including running, jumping, throwing, climbing, hanging, lifting, and carrying.
- f. Sports—excursions, hiking, camping, hunting, fishing, boating, etc.

3. A COLLEGE PROGRAM :

This program should be a continuation of the high school program, with more highly organized games and better organization than we have at present for participation of the entire student body. The college program is important, because these students become either teachers or leaders in some other professions, which will have a great influence on determining the policies of the commonwealth.

4. TEACHER-TRAINING FOR PHYSICAL AND HEALTH EDUCATION :

It is important that teachers be trained in physical and health education whether they be class-room teachers or special teachers. The right type of training will create the proper attitude and give training to meet problems in physical and health education, and contribute towards making education more vital and dynamic.

5. ATHLETICS :

Athletics should be made educational. It should be a part of the physical education program. Athletics should not be neglected, neither should it overshadow other parts of the school program. It should be a part of the educational life pro-

gram of the pupils best to fit them for life in the school and in the community. There should be close co-operation between the Athletic Association and the State Supervisor of Physical and Health Education. The trend in this respect is shown by replies to questionnaires sent the principals of California and New Jersey.

* Results of October Questionnaire (from California).

"With the October *News Letter* a short questionnaire was sent to high school principals. The questions were to be answered 'yes' or 'no', and are as follows:

1. Do you think athletics should be part of the physical education program?
2. Do you favor State high school championship games in athletics?
3. After reading School Law of 1925, page 299, Section 7, line 7, do you think the State Supervisor should exercise general control over all athletic activities of the public schools?"

RESULTS

	Number of Question	YES	NO	Not answered	Answered with Qualifications	Total
Senior High School	1	308	23	5	1	338
	2	67	259	10	2	338
	3	218	72	13	35	338
Junior High Schools	1	59	3	2	1	65
	2	7	55	1	2	65
	3	42	12	3	8	65

Regarding the advisability of a close contact between the State Athletic Association and the

Department of Physical Education in New Jersey—

67 principals favor such an arrangement.

14 report adversely, and

8 signify themselves to be neutral.

6. PLAYGROUNDS:

A better correlation of effort with the recreation club and a better use of school playgrounds after school and during the summer months, particularly to look after the school children.

B. HEALTH EDUCATION:

The aim of health education should be to build a happy, healthy and more efficient citizenship. A report of the International Health Conference, N. E. A., 1923, defined Health Education as: "The sum of the experiences in the school and elsewhere which favorably influence habits, attitudes and knowledge related to individual and community health." The program may be listed under three heads:

1. Health Supervision and Administration, which should include practices, policies and elements of the school program in order to bring about the desired results. This may include such things as: Safety from eye-strain depending on the selection of books, blackboard and the placing of windows, desks and furniture; safety provisions for fire and accident protection; organizing a health council composed of the principal, Science, Civics, English and Physical Education teachers; efficient janitor service; protection of food service; arrangement for and provision of doctors, nurses, and equipment to give health service.
2. Health Service. The doctor, nurse dentist, oculist and nutritionist should be part of the school force under the school administrator, to give examinations, aid in corrections and administer inoculations for protection against certain contagious diseases; special assistance should be given to handicapped children.

3. Health Instruction is primarily in the hands of the teachers, although all others connected with the school program can contribute. Instruction should create habits and attitudes, and provide knowledge in health education. This instruction may include safety education, protection from infection through habit training, of covering noses and mouths when sneezing, washing hands before lunch, proper use of wash bowls, towels and soap; instruction regarding foods and food selection; weighing and measuring should also be a part of the educational procedure. The children should be made interested in their welfare and receive training and accept direction of activities that will bring the least suffering and the most joy into their lives. The program may be diagrammed as follows:

IV. THE STAFF:

In considering the future needs for a physical and health education staff, it will be well to consider—

- the practice of other states, and
- the program of work for the members of the staff.

(a)

States	Number on Staff	Personnel
Ala.	2	State Supervisor and Woman Assistant Supervisor.
Conn.	3	State Supervisor and two assistants.
Mass.	2	State Supervisor and Woman Assistant Supervisor.

(a)		
States	Number on Staff	Personnel
N. J.	3	State Supervisor and man and woman Physical and Health Education Supervisor.
Penna.	5	State Supervisor and 1 Health Education Supervisor, 1 Nurse, and 2 Physical Education Supervisors.
Va.	12	State Supervisor and 1 woman assistant and 10 district supervisors.
Calif.	3	State Supervisor and 1 woman supervisor and 1 man supervisor.
*Fla.	2	State Supervisor and 1 woman health education assistant.

(b) The program for the staff is outlined in Section 5.

V. PROGRAM FOR STATE SUPERVISOR OF PHYSICAL AND HEALTH EDUCATION :

It should be the duty of the State Supervisor of Physical and Health Education working in co-operation with other members of the State Department of Public Instruction, county superintendents, principals, teachers, State Board of Health and other agencies that can be of assistance in promoting the school physical and health education program. The program may be listed under the following heads:

1. Providing for and preparing manuals. It would probably be wise to prepare manuals of physical and health education in 4 types; grades 1 through 3; grades 4 through 6; junior high school and senior high school. California has practically the same division, but provides for an extra health manual. Some states provide for a special rural manual. It may be necessary to prepare a monograph for adapting the manual provided to suit them to rural conditions, but it seems that there is not enough difference in rural and urban people of America to make such distinction. The population is not definitely rural or urban. Consolidation of schools is making possible facilities for rural children that are equal to provisions made for urban children.

* Salary and expenses for woman assistant furnished temporarily by Florida Public Health Association.

2. **Teacher-Training.** The program of physical and health education is vitally connected with the problem of teacher-training. The attitude of the general or class-room teacher has a marked effect on the success or failure of the physical education program.

The general requirement regarding training of teachers in health and physical education in Florida is 12 semester hours in physical and health education for the special teachers, with no requirements in physical and health education for the class-room or general teacher. The training of different types of teachers may be grouped under the following heads:

- a. **Class-room Grade Teacher.**

Most of the states have a requirement for physical and health education for the certification of the class-room teacher. West Virginia requires 2 hours in health education and 4 hours in physical education. The Alabama State Board of Education requires of each teacher who receives a certificate to teach, the satisfactory completion of an approved course in physical and health education covering a minimum of 48 lessons. The colleges of the State usually give about 3 hours credit for this course. The West Law in Virginia requires that all teachers receive training in physical and health education that will enable them to give health inspection of the children.

- b. **Junior and Senior High School Departmental Teachers.**

The training of this group of teachers should be about the same in number of hours as the group under "a", but adapted to upper grade children.

- c. **Combined Physical and Health Education and Academic Subjects.**

It is necessary to have teachers prepared to teach physical education and teach some academic subjects since about 60% of our high schools having less than 100 enrolled students, requires such a combination. Of the 158 physical

and health education teachers in Florida last year—

74 were teaching full-time physical and health education, of the 84 who combined physical and health education with other subjects.

Science	16	History and Civics....	8
Hygiene	15	Manual Training	2
Mathematics	11	Modern Language	2
Miscellaneous		Home Economics	2
Combinations	11	Agriculture	2
English	9	Business	2
Music	2	Principal	2

This type of teacher should take health and physical education as a minor in preparation for their degree in education, or they should take physical education as a major and other academic work as a minor. This minor should total about 12 semester hours and include such courses as the following:

The Teaching of Health and School Health Problems.....	4 Semester hours
Theory and Practice of Physical Education I	4 Semester hours
(Activities other than athletics, such as: games, stunts, gymnastics, tumbling, etc.)	
Theory and Practice of Physical Education II	4 Semester hours
Coaching of athletics, first aid, inter-school, intra-mural athletics in such sports as—	
For boys: Football, Soccer, Speedball, Tennis, Baseball, Basket ball, Volleyball, track, Diamond ball.	
For girls: Captain ball, Volley ball, Soccer, Field Hockey, Diamond ball, Tennis, etc.	

d. For the Full-time Specialists in Physical and Health Education.

This type of teacher may do supervising, teaching the physical education, coaching the

teams, directing the intra-mural program and acting as counselor for the school health program. Some electives should be provided in the college course which requires four years' training, and which should give a degree of B.S. in education with a major in physical and health education. These electives might make it possible for the teacher to teach one or two classes in other subjects where it is necessary.

There are five main items to be considered in building up a four-year course:

1. The technical physical education skill courses...20%
2. The educational culture courses and electives...20%
3. Courses in psychology and education.....20%
4. Related science courses.....20%
5. Methods and practice teaching.....20%

A fairly even balance should be kept between these different items. Ohio is requiring 40 semester hours in physical education. West Virginia requires 30. We have just completed arrangements for courses in Florida, one at the University of Florida, the other at the Florida State College for Women, that provide for 36 semester hours in the first group. In a study made by a committee from the American Physical Education Association, 39 states have requirements for the certification of physical education teachers.*

The state supervisor should co-operate with the teacher-training institutions to adopt these courses in order to better train teachers to fill the needs and demands of the schools and principals in working out the State program in physical and health education. The State supervisor should also co-operate with the state supervisor of teacher-training in high schools, to give assistance in training these high school students who come out from certain schools of the county on temporary teaching certificates.

There should also be provision made for training of teachers in service. This can be done

* Preliminary Report, Committee on State Requirements, American Physical Education Association, May 25, 1928.

through summer school, extension courses, institutes and demonstration schools.

3. Certification. The state director of physical and health education should work with the Bureau of Certification regarding issuing, rules and regulations on issuing certificates to physical and health education teachers. These certificates may be of the following kinds:

The full-time or physical education specialist.

The combined physical education and academic teacher.

The grade or class-room teacher.

The junior and senior high school departmental teacher.

Some provision may be worked out with this bureau regarding the annual health examination of the teachers. It may be better, however, to include this annual health examination as a part of the standardization of schools.

4. The health education program and its relationships. The health education program in the schools should be under the school administrators and the supervisor of physical and health education should work with the school administrators of the State, the medical and dental associations, State Board of Health and other organizations that can, and are willing to contribute to the school health program. The health service by the doctor, dentist, nurse, oculist and nutritionist should be under the administration of the school authorities with each specialist having control of his immediate problem. Other such organizations such as the Woman's Club, Parent-Teacher Associations and Public Health Association, etc., should be interested and guided in working out the problems pertaining to health in school and home. The items in the school education program can be listed under the following heads:

- a. Health Habit Formation.

- b. Health Training and Instruction.

- c. Mental Hygiene.

- d. Social Hygiene.

- e. Nutrition and Food Selection.

- f. Posture and its Relation to Health Condition.
- g. Community Hygiene.
- h. Medical, Dental and Physical Examinations.
- i. Exclusions and Absences from School.
- j. Corrections of Physical and Dental Defects.
- k. Health of Teachers and Annual Examination.
- l. Sanitation of the School Plant.
- m. The Hygienic Arrangement and Administration of the School Program.
- n. Correlation with Other Subjects.

The individual schools should be encouraged to provide for a school health committee composed of the teachers of English, civics, history, home economics, science, and physical education, and also the school nurse where one is provided.

5. Relationship to Athletic Association and Athletic Groups. The Florida High School Athletic Association is functioning and improvements are being made each year. It would probably help conditions if the athletic and physical education groups were tied closer together. Athletics is a part of the physical education program and should not dominate the physical education program of the school. The athletic coaches should be trained in physical education, and physical education teachers should be trained in coaching some games.

The trend over the country is to make athletics educational and a part of the school educational program. Under Section 3 are listed surveys from California and New Jersey regarding the attitude of principals towards a closer union in athletics and physical education, or, the Athletic Association and the State Department of Education. The two working together could produce a system of awarding letters on a point system, which takes into account the ability to do such things as running, jumping, swimming, diving and other stunts as well as scholarship, school spirit and co-operative participation in major and minor athletics and school activities. Such a system has been worked out for the girls in North Carolina; Missouri has an excellent system planned and operating for the boys.

6. Promotion of Programs. The State Supervisor of Physical and Health Education should set standards and promote such programs as:
 - a. Motor-ability tests.
 - b. Play days.
 - c. Health days and pageants.
 - d. Health organization of school program.
 - e. Blue Ribbon contests for excellence in health and physical condition.
7. Training of Teachers in Service. The teachers now in service should be provided with all possible agencies to meet the requirements recommended under Section 3 regarding certification. The State Supervisor should co-operate with the teacher-training institutions and the Divisions of Extension, and other agencies to provide for this opportunity. This can be done by:
 - a. Work at Institutions.
 - b. District meetings of the Education Association.
 - c. State Meetings of the Education Association.
 - d. Visits to the individual schools and teachers.
 - e. Conferences with groups.
 - f. Demonstrations arranged at the different meetings.
8. The State Supervisor should maintain a service and reference bureau for the assistance of superintendents, principals and teachers; this can be done in the following ways:
 - a. Monthly News Letters.
 - b. Pamphlets on Physical and Health Education.
 - c. Plans of gymnasium, playfields, courts, locker rooms, showers, offices, etc.
 - d. Bibliographies of books and reference material on health and physical education.
 - e. Lists and specifications of supplies and equipment, and arrangements with sporting goods firms for prices on standard sets of athletic supplies.
 - f. Lists of trained physical and health education teachers for superintendents and principals.

- g. Plans and procedure in organizing the Physical and Health Education Program.
 - h. Lists of jobs for well-trained Physical and Health Education teachers.
 - i. Standards for individuals, schools and programs.
9. Special Rural Problems. Adjustments to suit rural conditions will be a special part of the program. Consolidation of schools is rapidly taking place; but provision must be made in the meantime for small schools with poorly trained teachers. These schools will necessarily be limited in funds for equipment and information about building such equipment and obtaining supplies to carry on a physical and health education program.

VI. WHAT HAS BEEN ACCOMPLISHED :

1. The Athletic Association is functioning with reasonably good results. It passed new regulations this year requiring all school teams to be coached by faculty members who hold teachers' certificates. Football and baseball state championships were abolished this year.
2. The Health Crusade for health habit formation is operating successfully under the direction of a woman health director whose salary and traveling expenses are paid from the sale of Christmas seals by the Florida Public Health Association, which is in no way connected with the State Board of Health. The report for 1926-27 showed 47,180 chore cards sold, and 11,173 pins ordered. This indicates that 11,173 children kept their health habits and marked their cards for a period of 24 weeks. 7,762 tooth brushes were sold, 5 cents each. 1,660 health cards for junior high school crusaders were purchased by the different schools.
3. A summary was prepared of the health education score card published by the State Department of Education, with which 257 schools measured their program of physical and health education. These schools were distributed in 58 of the 67 counties. Three of the counties sent in county-wide scores or, of all the schools in the county. This report was

not required, consequently, comparatively few schools reported. The tabulation sheet attached is for the year 1926-27. This report shows that 93,419 children were included in the programs of the 257 schools. This is a small part of the 370,729 children, which is the approximate total enrollment for the State in 1926-27.

A summary of the health education score card for 1927-28, with which two hundred twenty-five schools in thirty-two counties scored themselves, shows marked improvement in more accurate scoring and better organized programs in different sections of the State. Seven counties sent in county-wide reports scoring every school in the county. These counties and their scores are as follows:

Seminole	538.8	Indian River	523.8
Monroe	532.	Volusia	519.5
Pinellas	531.2	Orange	503.4
		Leon	474.5

In order to encourage better programs and co-operation of the different school officials, the county cup is offered to the county giving the best program in physical and health education. Two previous years the cup was won by Orange county. This year, Seminole county was declared winner with a score 538.8 out of a possible 600.

A summary of some of the interesting points of this score card shows that:

- 59,775 children were in the schools that were scored.
- 51,721 children were given health examinations.
- 49,236 children were given dental examination.
- 47,862 children were weighed monthly and measured semi-annually.
- 44,822 defects were found.
- 18,223 of these defects were corrected.
- 2,205 teachers were employed in the schools reported.
- 1,927 teachers had annual health examination.
- 1,387 reported to have had training in physical and health education within the last four years.

The purpose of the health education score card is:

1. To arouse interest in better school physical and health education programs throughout the State of Florida.
2. To aid the State Department of Public Instruction, the county superintendents, principals, individual teachers, nurses, schools and communities in securing definite knowledge of existing conditions.
3. To promote action in improving conditions.
4. To suggest things that can be done to build children into a happy, healthy and efficient citizenry.
5. To be used in evaluating what has been done.

A revision will be made of this score card for next year, and it is hoped that the superintendents, principals, teachers, and nurses will find it more useful with their physical and health education programs and that more schools and counties will score their programs.

4. Teacher-Training Work. Arrangement has been made for a four-year course in physical and health education at the Florida State College for Women and the University of Florida. Arrangements are not quite complete at the Woman's College; but the plans will go into effect at the University next year. The degree will be B.S. in Education with a minor in some academic subject. Provision is being made also for a minor in physical education.
5. At the request of the Principals Conference, the University of Florida faculty voted unanimously to allow physical education as one of the sixteen entrance units, provided the course in physical and health education is approved by the State Supervisor of Physical and Health Education. The president of the Woman's College has promised his support for a similar arrangement regarding entrance to the Woman's College.
6. A State Manual in Physical and Health Education for Senior High Schools has been prepared.

7. A State Physical and Health Education Association has been organized and is working on such problems as: sportsmanship, point systems for boys and girls and a physical education program.

VII. PLAY AREAS:

The greatest handicap next to lack of trained teachers that is retarding the physical and health education program, is the lack of play area for the different schools in the State. Enormous sums have been expended on school buildings in Florida that are not supplied with play areas. New schools are being constructed today which will house as many as 500 children, but have no grounds or play areas. The Tampa School Board has adopted the Strayer and Engelhardt standards as a part of their building program. They have recently constructed several elementary schools with five acres of play space, two junior high schools with ten acres and two senior high schools with twenty acres. It would be well for the entire State to adopt this program:

A one-room rural school should have a minimum of 2 acres.

A two-room rural school should have a minimum of 3 acres.

A three-room rural school should have a minimum of 4 acres.

A consolidated school not less than 10 acres.

A junior high school 8 to 12 acres.

A senior high school 12 acres or more.

The size and numbers of the fields will depend upon the size of the school. The junior and senior high schools will play a more highly organized type of game and consequently require more space. There should be space enough to permit both boys and girls to play at the same time, particularly after school hours. In addition to the play fields there should be provided tennis courts, track and field facilities, and courts for such games as volley ball, diamond ball, dodge ball, etc. The equipment for field events should be sufficient in quantity to permit group contests. Supplies such as balls, bats, nets, etc., should be furnished on the same basis as chalk, erasers, etc.

VIII. GYMNASIUMS AND INDOOR EQUIPMENT:

The recommendations from The Sixth Year Book and from Standards for High School Buildings should be adopted. The Florida condition calls for a more open type of gymnasium with additional windows so arranged that they can be opened for the best ventilation. Gymnasiums should be provided for elementary schools where funds are available and where schools are large enough for such expenditure. Out-of-door plays is recommended when weather conditions permit. Protection from wind, sun and rain is very desirable for the gymnasium classes in order to prevent dismissal and confusion of the usual school routine when such conditions occur. Adequate locker rooms, lockers, baskets for equipment and other facilities recommended in the reference mentioned above should be provided for.

IX. TIME ALLOTMENT:

The N. E. A. report in the Sixth Year Book regarding time allotment is recommended for adoption as an end towards which we should work. The following is the time allotment recommended for secondary schools:

“Frequency of periods in junior high school—A period each day is recommended. Four of these periods are for activities, and one for the teaching of hygiene.

“High school—The same time allotment as in the junior high is recommended.

“Length of period—The ideal period for both junior and senior high schools is 60 minutes. This permits of a well-balanced working program followed up by a bath. The 45 minutes frequently is too brief and permits of bathing only at the expense of valuable lesson time.”

The present requirement regarding physical education for the high schools is two regular school periods per week as a minimum time allotment for each pupil. The time required for elementary or grade schools is 15 minutes per day as a minimum, which may be combined with the recess period for the development of

organized play. The New Jersey Survey of Physical and Health Education, made by James Edward Rogers of the Play Ground and Recreation Association of America for the Commission of Education, finds that 30 minutes per day per child is devoted to physical education. Des Moines, Iowa has set aside a daily period of 30 minutes for elementary schools; five 60-minute periods weekly for junior high schools and 3 75-minute periods for senior high schools. Providence, Rhode Island has similar requirements. This time allotment does not include the ten minutes at recess nor the 4 two-minute drills in the class room.

X. PERSONNEL:

The recommendations of the N. E. A., Department of Superintendence, Sixth Year Book, should be adopted. Where it is possible to obtain equipment and gymnasium space the work should be given to regular classes under well-trained men and women.

The following is the recommendation from the Sixth Year Book:

Teaching Staff:

"There should be men teachers for the boys, and women teachers for the girls. It is generally considered that a teacher can serve up to 250 pupils and teach 25 classes per week. Consultation periods, special classes, and after-school play supervision should not call for more than ten additional hours per week, making the total load of the teacher 35 periods per week. In schools with 1,200 pupil periods, 48 pupils per class are recommended, and 60 in schools with 1,500 pupil periods. Special classes should number only from ten to twelve members. Teacher-training requirements may be found under separate heading elsewhere in the report. Training in service should be encouraged and recognized in the salary schedule. Teachers should be considered and consider themselves as members of the faculty, and attend faculty meetings. It is important that they should know the standing of students in other subjects and, on the other hand, important that they should furnish health and behavior information of the students to the other teachers, that may explain failure in their school work."

The type of teacher mentioned in the above recommendation should be the one who has received training during the four years in college, and who has completed requirements for the major group in physical and health education. This type of teacher should hold a graduate State certificate with full license to teach physical education. Another type of physical education teacher is the one that devotes only a part of his time to physical and health education and teaches some academic subject. This teacher should be granted a different type of certificate from the one who has majored in physical education, the condition of the certificate being amenable to change, when said teacher shall have completed further requirements similar to the major group. These requirements, of course, must in their changes keep pace with the changes in other requirements in certification to be decided on by the certification bureau. In the elementary schools, there will of course, be class-room teachers who must necessarily do some work in physical and health education in order to put across a successful physical and health education program, and make more vital and dynamic our education program. The ideal arrangement would be to have these teachers well enough trained in physical and health education so that they could correlate this work with their whole program; but we are necessarily limited in the time that we can demand in the training requirements of such teachers. A reasonable allotment seems to be six semester hours in physical and health education for all teachers. This will probably require the specialists in physical education for some of the elementary schools, whose duty it will be to give assistance to the lower grade teachers and take direct charge of the students of the upper grades. This type of teacher could plan grounds, program and equipment, order and maintain supplies in addition to giving assistance to the lower grade teachers and teaching classes of the upper grade students.

XI. THE IMPORTANCE OF PHYSICAL AND HEALTH EDUCATION IN THE EDUCATIONAL PROGRAM:

The importance of physical education as a part of the school program is well stated in the Objectives and

Aims, by Hetherington and Williams. Williams says: "The objective of physical education is to provide opportunity for the individual to act in situations that are physically wholesome, mentally stimulating and satisfying, and socially sound." Hetherington outlines the aims of physical education as follows:

1. "Physical education organizes the opportunities for learning physical education activities, and in addition organizes and teaches people in the activities.
2. Physical education, inasmuch as its activities are the expression of the human nature, develops and gives the leader the opportunity to guide the development to the point of self-direction more than in any other activities during childhood and youth the system of interests, impulses, ideals, and attitudes that are at the foundation of character education. This system of interests may be symbolized by fair play and sportsmanship.
3. Physical education develops the total integrating function of the nervous system, except for the nervous integration of the finer finger and linguistic activities; thus it develops the energy, strength, and skill resources of the total neuro-motor system, under brain or mental control, for all the functions of life.
4. Physical education develops organic power; i. e., the power of the organic mechanisms (circulatory power, respiratory power, digestive power, heat-regulating power, eliminating power) and general power symbolized by endurance. Organic development is the developmental source of health. This phase of development as an educational objective has received so little consideration that it is scarcely known among educators as a possibility. Yet it is the most conspicuous fact, apart from motor skill, in the normal development of the athlete.
5. Physical education, because of the intense interest of children and youth in its activities and in achievement and development, gives a natural scientific basis for teaching health as self-direction in keeping fit, first, for the sake of satisfaction in

achievement, and then for the older purposes of life; and thus it is the correlating center in health-teaching or health-education. Other activities, or subjects of study in a scientifically organized program of health teaching can reinforce the ideals and expand the information in the self-directing "keep-fit" program organized in physical education.

From these demonstrable objectives it becomes clear that physical education is concerned with the adjustment of the growing organism on which the other divisions of the school program should build a superstructure and a refinement of detail."

The aims of health education are briefly stated by the Joint Health Committee as follows:

1. To instruct children and youth so that they may conserve and improve their own health.
2. To establish in them the habits and principles of living which throughout their school life, and in later years, will assure that abundant vigor and vitality which provide the basis for the greatest possible happiness and service in personal, family and community life.
3. To influence parents and other adults, through the health education program for children, to better habits and attitudes, so that the school may become an effective agency for the promotion of the social aspects of health education in the family and community as well as in the school itself.
4. To improve the individual and community life of the future; to insure a better second generation, and still better third generation; a healthier and fitter nation and race.

XII. PLAN OR PROCEDURE:

Since physical and health education is a vital part of the educational program, intelligent and determined effort, based on scientific procedure, should be expended in order to obtain such a program of

physical and health education, which will contribute most to the child and to civilization. To accomplish this, we should have the following:

1. A program, or a course of study in physical and health education from the first grade through college. Manuals should be provided for the assistance of teachers of the public schools. This program should be:
 - a. Graded, selected and tested.
 - b. Adapted to the individual interests and needs of the child.
 - c. Organized to include all children, with no special privileges to the small group.
2. Ample facilities should be provided: Special play ground area and equipment, gymnasiums, lockers, showers and other equipment and supplies, such as: balls, bats, nets, etc., for carrying on the program.
3. Trained leadership is a vital necessity: Both men and women should be trained for carrying on the program in the different grade levels.
4. Ample time allotment should be provided in order to allow the proper participation by all students.
5. Adequate health service under the supervision of the school administrator should be provided.
6. Scientifically and professionally trained school administrators to provide for the school health and physical education program.

CHAPTER VIII.

NEGRO EDUCATION

A Division of Negro Education is maintained in the State Departments of Public Instruction of all the Southern States. Florida was the last State to establish this division initiating the work in January of 1920.

From January 1, 1920 to July 1, 1927, Mr. J. H. Brinson served as State Agent for Negro Education, acting as a pioneer among county superintendents and school boards when the cause of Negro Education was less popular than it is today. As is the case with all educational pioneering, the evidences of Mr. Brinson's activities exist more in the changed attitudes of school officials than in imposing material constructions. From July 1, 1927 till the present date D. E. Williams, the present incumbent, has served as State Agent for Negro Education.

As nearly as possible every phase of education for Negroes and every part of the State receive the help and attention of this division.

The Division of Negro Education operates through the office of county school boards and superintendents. The present State Agent has attempted to accomplish the following aims: (1) to induce school boards to adopt policies for improvement of Negro schools; (2) to encourage adequate appropriations from public funds for the support of Negro education; (3) to enlist the active interest of superintendents in providing adequate buildings and equipment for Negro schools; (4) to promote living salaries for Negro teachers; (5) to supervise teaching in Negro schools; (6) to encourage improvement of the living conditions and habits of Negroes through the schools, and (7) to co-operate with the State Board of Control in the development of the Florida Agricultural and Mechanical College and to work with the private negro schools in the extension of educational facilities for Negroes.

For the year 1927-28 the present State Agent in attempting to accomplish the above aims traveled approximately

forty thousand miles, made 275 visits to county superintendents, 250 visits to Negro schools, 12 visits to Negro colleges; attended 6 district meetings of the Florida Education Association, the annual meeting of the Florida Education Association, 2 district meetings of the State Association of Negro Teachers, the annual meeting of the State Association of Negro Teachers, the social workers' conference at Lakeland, the superintendents' conference at Jacksonville, the High School Principals' Conference at Gainesville, the Elementary Supervisors' Conference at Gainesville, the conference for State Agents for Negro Education at Signal Mountain, the meeting of the National Association of Teachers in Colored Schools at Nashville, and held a Jeanes Conference in Jacksonville. The remainder of the time was spent doing office work at Tallahassee.

The Division of Negro Education is under the administration of the State Superintendent of Public Instruction. Its activities are maintained and supported by funds from the following sources: (1) the General Education Board; (2) the Julius Rosenwald Fund; (3) the Jeanes Fund, and (4) the John F. Slater Fund.

THE GENERAL EDUCATION BOARD

The General Education Board of 61 Broadway, New York City, has made many and large stimulative appropriations for education in the Southern States, maintaining the divisions of elementary and high school supervision in State Departments of Public Instruction until the States, through their Legislatures, assumed the support of these divisions by making appropriations from State funds for their maintenance. In like manner the Board, with Mr. Jackson Davis of Richmond, Virginia, and Mr. Leo M. Favrot of Baton Rouge, Louisiana, serving as Field Agents, has maintained the Division of Negro Education in all the Southern States until the State Legislatures supplemented with appropriations from public funds which has been done in those Southern States making greatest progress in Negro education. In Florida the division has been and is maintained by the Board.

In addition to maintaining the Division of Negro Education in the Southern States the Board has made appropriations for each State to be spent by the State Agent for buy-

ing equipment for Negro schools. These grants, distributed annually for a number of years, have exerted positive influence in stimulating county school officials to appropriate public funds to purchase equipment for Negro schools and in arousing the Negro patrons to make personal donations toward the material improvement and equipment of their schools. The developing influence of these grants has been so great that school officials are beginning to consider the proper equipping of Negro schools as a part of their official functions.

The table below shows those counties and schools availing themselves of the use of this aid in 1927-28.

<i>County</i>	<i>School</i>	<i>Use</i>	<i>Amounts</i>
Polk	Polk County Training School, Florence Villa, Florida.	Trades and Home Economics equipment	\$326.48
Lake	Lake County Training School, Leesburg, Florida.	Trades and Home Economics equipment	\$127.10
St. Lucie	St. Lucie County Training School, Ft. Pierce, Florida.	Trades and Home Economics equipment	\$312.20
Escambia	George Washington High School, Pensacola, Florida.	Trades and Home Economics equipment	\$212.94
Putnam	Central Academy, Palatka, Florida.	Trades and Home Economics equipment	\$211.75
Broward	Broward County Training School, Ft. Lauderdale, Florida.	Trades and Home Economics equipment	\$192.80

THE JULIUS ROSENWALD FUND

A few years ago Mr. Julius Rosenwald of Chicago began to help finance the building of schoolhouses for Negroes in communities where the need was brought to his attention. Requests for aid became so numerous and varied that Mr. Rosenwald organized these activities with a field agent to investigate applications and grant aid.

The organized philanthropy became known as the Julius Rosenwald Fund. Mr. S. L. Smith became the

General Field Agent for the Fund with offices at Nashville, Tennessee.

The Fund has sought to help satisfy the crying need for adequate school buildings for Negro children in the Southern States. It has generously aided in the construction of schoolhouses, shops, and teachers' homes wherever the buildings were constructed according to plans and specifications approved by the General Field Agent. To date over four thousand school buildings receiving Rosenwald aid have been constructed in the Southern States. Within the last year the Fund has extended its activities to include the development of libraries in Negro schools.

ROSENWALD SCHOOLS

The following tables show the distribution by states of the Rosenwald aid for schools:

1.

SUMMARY OF COMPLETED BUILDINGS JULY 1, 1928

STATE	NO BUILDINGS			CAPACITY		Total Cost Buildings, Grounds & Equipment	CONTRIBUTIONS			
	Schools	Homes	Shops	Teacher	Pupil		Negroes	Whites	Public	Rosenwald
Alabama	358	7	5	755	33,975	\$ 979,401	\$ 375,706	\$ 75,291	\$ 322,584	\$ 205,820

* Not included in total number buildings.

We learn from the first table that the Negroes themselves have contributed more money toward financing these buildings than has the Fund. The Negroes through their contributions become thoroughly imbued with the feeling that the buildings are theirs in reality and theirs to maintain in first class condition.

It is hoped that the financial aid given toward the construction of schoolhouses will influence school officials to more adequately care for the needs of Negro children. With this hope in mind, aid has been granted on a decreasing scale. Formerly larger amounts of aid were given on all types of buildings than are now granted. It is hoped that school officials will realize their obligations to the Negro citizens and provide for them voluntarily without receiving large stimulative assistance from philanthropy.

The Fund is now limiting the number of small buildings aided in each State. It is hoped that by limiting the number of small buildings aided that small communities may be consolidated, forming large school centers where the Fund will aid on the construction of large Rosenwald buildings giving more advantages to all the children. The trend of aid is in favor of permanent construction of brick or brick veneer in preference to frame construction. A bonus of additional money is given to stimulate this type of construction.

Possibly no single agency has exerted greater influence in the construction of sanitary, hygienic, safe, well-lighted and well-ventilated schoolhouses for Negroes than the Rosenwald Fund. The plans for the Rosenwald Schools are drawn by Mr. S. L. Smith, who was trained for this work by Dr. F. B. Dresslar, possibly the Nation's greatest and most reliable building expert and for many years employed by the Federal Bureau of Education. Incidentally, school officials have recognized the superior features of the Rosenwald Schools and have built schoolhouses for white children on similar plans. Since the State Department of Public Instruction does not have a division of School Building Service to help school officials throughout the State, the very best plans and specifications available for small schoolhouses can be secured from this division without cost.

The Fund aids on the construction of Rosenwald buildings on the following plan:

Teacher Type Frame Construction Permanent Construction

1	\$ 200.00	
2	500.00	
3	700.00	\$ 850.00*
4	1,000.00	1,200.00
5	1,200.00	1,450.00
6	1,400.00	1,700.00

ROSENWALD LIBRARIES

Some members of the supervisory staff of the State Department of Public Instruction have observed that Negro children in the elementary grades in Florida schools read only the basal readers while white children in corresponding grades read the basal readers and several supplementary books in addition. Evidently this condition is pretty general throughout the South. Those administering the Rosenwald Fund realizing this lack of supplementary readers and the absence of any kind of library in the Negro schools began in 1927-28 to help the schools buy libraries. The libraries bought were of two sizes, costing \$75.00 and \$105.00.

In buying the libraries the Negroes paid one-third of the cost, the county or school district one-third, and the Fund one-third. The Fund bought, packed, shipped and paid the freight charges on all libraries. The \$105.00 library contained 157 books and the \$75.00 library contained 129 books. These values were possible on account of the discount allowed for wholesale purchase and cash payment by the Fund, the schools receiving the benefit. The books were selected by the American Library Association to fit the needs of Negro children in the elementary and grammar grades. Last year these libraries were allotted to Rosenwald and County Training Schools only. This year they can be gotten for any good Negro school. All libraries are in bookcases, all books being numbered and receiving proper care. The table below shows the distribution of libraries in Florida.

THE JEANES FUND

The Jeanes Fund, an endowment left by Miss Anna T. Jeanes of Philadelphia and administered by Dr. James H. Dillard of Charlottesville, Virginia, with the assistance of Mr. B. C. Caldwell of Nachitoches, Louisiana, and Mr. W. T. B. Williams of Tuskegee, Alabama, aids in the payment of salaries of trained women employed to teach the simple yet essential home industries, health, and sanitation in rural Negro schools and homes. These women, designated as Jeanes Industrial Supervisors, have in the past exerted great influence on county school officials in bringing to their attention the dire needs of the Negro people for school buildings, equipment, and trained teachers and have influenced the Negro patrons in raising money to aid toward constructing schoolhouses, buying school equipment and lengthening school terms. It is hoped that we may in the future set up minimum educational standards for the Jeanes Supervisors and that they will become invaluable assistants to the county superintendents in supervising classroom instruction, stimulating school attendance, distributing school supplies, and so on in Negro schools.

The following tables are a resume of activities of Jeanes Supervisors:

THE SLATER FUND

The Slater Fund, an endowment left by John F. Slater of Chicago and administered by the same men as those administering the Jeanes Fund, helps to pay the teachers' salaries in one Negro school in a county which is known as the County Training School. The curriculum, length of term, and quality of instruction in this one school are planned and executed for the purpose of training teachers for the other Negro schools in the county. Negro public schools in Florida must be taught by Negro teachers. These teachers should have some professional training in addition to thorough instruction in the content subjects. Until the time when the demands of Negro education are developed to justify the employment of only college trained teachers, each county, especially the most populous counties, should maintain a Teacher-Training Department in the largest and best Negro school in the county for the purpose of training its teachers. The Slater Fund attempts to stimulate and aid the training of Negro teachers in this manner.

The following tables show the activities of the County Training Schools:

Table No. 1

INSTITUTIONS OF HIGHER LEARNING AND
PRIVATE SCHOOLS

FLORIDA AGRICULTURAL AND MECHANICAL COLLEGE

In 1887 a State Normal School for Negro Teachers was established by legislative enactment at Tallahassee. In 1905 this school was placed under the management of the State Board of Control as one of the institutions of higher learning. In 1909 the name was changed by the Legislature to The Florida Agricultural and Mechanical College for Negroes. State appropriations for this school have been supplemented during the last biennium by the General Education Board and Morrill Funds to the extent of about \$167,000. The college plant is valued at about \$1,500,000.

The college division operating on a four-year basis offers four separate curricula leading to the Bachelor's degree in the following: College of Liberal Arts, School of Education, School of Agriculture, and School of Mechanical Arts. A diploma is given on completion of two years of college work in Home Economics and Education and three years in Nursing. The Demonstration School consists of six elementary grades and the Junior-Senior High School organized on the 3-3 plan. Summer School, Extension and Correspondence Divisions offer attractive facilities for teachers for increased professional training.

The enrollment for 1926-28 has been as follows:

1926-27

Regular Session	510
Summer School	323
Extension Division	210

1927-28

Regular Session	434
Summer School	363
Extension Division	216

EDWARD WATERS COLLEGE

Edward Waters College at Jacksonville is controlled and supported by the African Methodist Episcopal Church of Florida. It includes in its organization the College of

Liberal Arts, School of Theology, Normal School, Preparatory (High School) and elementary schools. The average annual enrollment is about 250 students. The college owns approximately 173 acres of land located in Jacksonville, Hibernia, and High Springs. Developments on the college site in Jacksonville are valued at \$580,000.

FLORIDA NORMAL AND INDUSTRIAL INSTITUTE

The Florida Normal and Industrial Institute located at St. Augustine offers training to about 250 students annually. On the school site of 1,000 acres have been erected four brick and concrete buildings and several smaller frame buildings valued at about \$350,000.

BETHUNE-COOKMAN COLLEGE

The Bethune-Cookman College at Daytona Beach valued at over \$600,000 is supported by the American Missionary Society. It offers regular High School and Junior College work and specialized courses to about 200 students annually.

FESSENDAN ACADEMY

Fessendan Academy located seven miles from Ocala is also supported and controlled by the American Missionary Society. Elementary and High School work are offered. Physical education, cooking, sewing, and manual training are especially emphasized for high school students. The school's enrollment is about 200 pupils.

BOYLAN HOME INDUSTRIAL TRAINING SCHOOL FOR NEGRO GIRLS

Boylan Home Industrial Training School for Negro Girls located at Jacksonville is supported by the Woman's Home Missionary Society of the Methodist Episcopal Church. Instruction in all elementary grades and in high school subjects is given with special emphasis on Industrial and Teacher-Training.

CHAPTER IX.

THIS CHAPTER IS DEVOTED TO SCHOOL STATISTICS FOR THE SCHOOL YEARS OF 1926-1927 AND 1927-1928

It is to be hoped that the citizens of Florida, especially, will read the statistics given herein. They have been compiled by a great amount of labor on the part of County Superintendents and the statistical clerks in the State Department of Public Instruction. They cover a wide range of subjects in which the people of Florida are vitally interested. In order to assist in a study of this chapter we will here call attention to some of the more important features of it—especially to the second set of tables, and make some comparisons with statistics of former years.

In the past few years the number of schools has not increased in Florida, but rather decreased. This is due to the consolidation of schools, and the transportation of pupils. The enrollment in the schools has, however, increased rapidly in the past five years. In 1923 it was 251,080 while in 1928 it had increased to 361,357, an increase of more than 100,000. It is pleasing to know that the per cent of average attendance based upon enrollment continues to increase. In 1923 this per cent was 73 while in the last school year it was 79. This increase is perhaps due to a better school spirit in the State, better schools, compulsory attendance, better transportation of pupils, etc. A similar favorable condition is seen in the fact that the enrollment in the High Schools has increased from 20,408 in 1923 to 41,009 in 1928—an increase of more than 100 per cent. The number of teachers has increased in the past five years from 7,756 to 11,150. A noticeable fact in the reports is the increase in the length of school terms. In 1923 the average term for both races included, was 138 days but in the past year it was 154 days.

It is evident from statistics that teachers are being better paid for their services than they were a few years ago. In 1923 Florida paid its 7,756 teachers \$4,625,296.88, while in 1928 our 11,150 teachers received \$10,375,686.87. Table XIV, parts 1 and 2, however, shows that too many teachers still receive annual salaries too low to compensate them well for their services.

The total receipts of school funds last year, including cash on hand, amounted to more than forty-six and a half million dollars. Of this amount about two million was contributed by the State from various funds. The counties and districts contributed directly in taxes about sixteen and a half million. Loans and bond sales amounted to over eighteen million. Cash on hand at the beginning of the year was over nine million. The remainder came from other smaller sources.

Those who are interested in the distribution of the various State school funds to the different counties will find such information in table XVII, parts 1, 2 and 3, for the school year 1927-1928. This was the first year in which the new funds created by the Legislature of 1927 were available.

The great increase in population in Florida in the past few years has made the erection of many new school buildings a necessity. The expenditures for these buildings and their equipment have necessarily been large. Last year such expenditures amounted to \$8,050,286.10. However, the largest expenditure for that purpose in any one year was in 1925-26 when it reached the sum of \$14,525,884.99. Formerly the funds for building and equipment were provided largely by the counties, but that is not the case now. In 1926, when the fourteen and a half million was spent, \$13,742,113.05 was provided by special tax districts and only \$783,771.94 was furnished by the counties. In 1928, \$7,628,118.32 was spent by the districts for the building fund and only \$422,167.78 by the counties.

Building funds, especially when created by taxation, generally leave an indebtedness behind them. So it has been in Florida. The following table will show the net indebtedness of County School Boards and special tax districts for each of the past few years:

Year	County Indebtedness	District Indebtedness	Total Indebtedness
1923	\$4,246,764.74	\$ 8,939,994.51	\$13,186,759.25
1924	5,105,256.81	10,815,303.41	15,920,560.22
1925	4,641,406.60	13,922,209.38	18,563,615.98
1926	4,293,458.51	27,664,709.85	31,958,168.36
1927	4,602,270.02	47,515,760.28	52,118,030.30
1928	7,178,813.12	52,754,051.16	59,932,864.28

This indebtedness has been created chiefly by a few wealthy counties. In 1928, almost one fifth of it was borne by one county; almost one-third of it was borne by two counties and almost one half of it by four counties. Fourteen counties have no net county indebtedness at all and eight counties have no net district indebtedness.

The value of public school property in Florida has increased very greatly in the past few years. As reported by County Superintendents in 1923 its total value in that year was but little over \$20,000,000, but in 1928 it had increased to more than \$81,000,000. This was an increase of about \$12,000,000 per year, partly due to the erection of many new buildings and partly to the estimated value of real estate already owned. The value placed upon the school property in one county now is almost as great as the value of the school property of the entire State six years ago.

By reference to table XXI for 1927-28 it will be seen that there is a vast difference between the amounts paid in the different counties for all school purposes per pupil enrolled and per pupil in average attendance. The average amount paid per pupil enrolled in the State last year was \$75.06 and the amount paid per pupil in average attendance was \$98.47. One county last year paid \$200.83 per pupil enrolled, while a few counties paid only \$20.00 per pupil. While a few counties paid from \$210.00 to \$252.00 per pupil in average attendance, a few others paid from \$22.64 to \$28.15 on the same basis.

STATISTICAL TABLES COMPILED FROM DATA APPLYING TO SCHOOL YEAR 1926-1927

TABLE I.—Total Population and School Population—(Estimated)

THE DISTRIBUTION OF THE EQUALIZATION FUND FOR THE YEAR 1927-1928.

In making the apportionment, the State Board of Education assumed that:

1. The income of each county from State and County sources for the year could be used for the operation of the schools of the county for the year.

2. Three-fourths of the income for the year would be used for the payment of teachers' salaries for the minimum period.

3. Transportation of school children constituted a proper charge against the income for the year.

4. The entire ten mills of the assessed valuation of the county would be collected. The statute requires this assumption.

From the budgets and annual reports submitted by the county superintendents the estimated resources and costs were compiled. If the difference between these for any county showed that the county needed more money with which to operate schools for the minimum period, this difference was paid from the Equalization Fund. It was found necessary to take 111 days as a minimum period for the reason that the money would not pay for a longer minimum period. If the data from a county showed that the income from State and County funds was insufficient to operate the schools for the minimum period of 111 days, then no money was apportioned to the county.

TABLE XXIX.

THE DISTRIBUTION OF THE EQUALIZATION FUND FOR THE YEAR 1927-1928

Counties 1927-1928	Funds from County Sources	Funds from State Sources Exclusive of the Equalization Fund	Total Funds from County and State Sources not In- cluding Aid from Equaliz. Fund	4/3 of Salary Costs for 111 Days	Transporta- tion Costs for 111 Days	Total Costs for 111 Days	Amount needed to Com- plete Program of 111 Days	Grant from Equalization Fund
Alachua	\$110,905	\$ 43,997	\$154,902	\$165,175	\$ 15,508	\$180,683	\$ 25,781	\$ 26,171.02
